Astrology and Cosmology in the World's Religions Nicholas Campion,2012-06-11 An ambitious examination of cosmologies and astrologies from around the world The diversity of cultures Campion includes is impressive Jacqueline Feke History of Astronomy When you think of astrology you may think of the horoscope section in your local paper or of Nancy

Reagan's consultations with an astrologer in the White House in the 1980s. Yet almost every religion uses some form of astrology some way of thinking about the sun moon stars and planets and how they hold significance for human lives on earth. Astrology and Cosmology in the World's Religions offers an accessible overview of the astrologies of the world's religions placing them into context within theories of how the wider universe came into being and operates. Campion traces beliefs about the heavens among peoples ranging from ancient Egypt and China to Australia and Polynesia and India and the Islamic world. Addressing each religion in a separate chapter Campion outlines how by observing the celestial bodies people have engaged with the divine managed the future and attempted to understand events here on earth. This fascinating text offers a unique way to delve into comparative religions and will also appeal to those intrigued by New Age topics. Unlike most students of astrology Campion transcends the limitations of Western tradition to examine the nature and roles of astrological and cosmological concepts in cultures from all continents. His examples provide original insights into how cosmologies shape these cultures artistic intellectual and religious activities. Stephen McCluskey West Virginia University

Radiation in Art and Archeometry D.C. Creagh, D.A. Bradley, 2000-06-14 in: *inca publications misc creaghcov htm* About the cover This book contains twenty chapters covering a wide range of research in the fields of scientific conservation of art and archaeometry. The common thread is the use of radiation in these analyses. The term radiation is used in the widest possible sense. The book encompasses the use of electromagnetic radiation in its microwave infrared visible ultraviolet x ray and ray forms and the use of particulate forms such as electrons neutrons and charged particles for which the Planck's Law relation applies. In many cases there is an interplay between the two forms for example proton induced x ray emission PIXE secondary ion mass spectrometry SIMS. As far as possible the chapters have been arranged in order of ascending particle energy. Thus it commences with the use of microwaves and finishes with the use of rays. The authors were chosen on the basis of their expertise as practitioners of their particular field of study. This means that for example the mature fields of study such as the IR and UV study of paintings have been written by senior researchers whereas for the emerging fields of synchrotron and neutron techniques the chapters have been written by talented researchers at the commencement of their careers.
