

Rolls Royce Dawn 2014-2016 Workshop Manual

Abstract *Staphylococcus aureus* is the most common cause of nosocomial infection. The purpose of this study was to determine the prevalence of *S. aureus* in the hospital environment and to identify risk factors for colonization. A total of 100 samples were collected from the hospital environment and analyzed by culture and PCR. The results showed that 60% of the samples were positive for *S. aureus*. The risk factors for colonization were identified as the presence of the bacterium in the hospital environment and the use of antibiotics.
