Principal Components Analysis George H. Dunteman, 1989-05 For anyone in need of a concise introductory guide to principal components analysis this book is a must Through an effective use of simple mathematical geometrical and multiple real life examples such as crime statistics indicators of drug abuse and educational expenditures and by minimizing the use of matrix algebra the reader can quickly master and put this technique to immediate use

Principal Component Analysis I.T. Jolliffe, 2013-03-09 Principal component analysis is probably the oldest and best known of the It was first introduced by Pearson 1901 techniques of multivariate analysis and developed independently by Hotelling 1933 Like many multivariate methods it was not widely used until the advent of electronic computers but it is now well entrenched in virtually every statistical computer package The central idea of principal component analysis is to reduce the dimensionality of a data set in which there are a large number of interrelated variables while retaining as much as possible of the variation present in the data set This reduction is achieved by transforming to a new set of variables the principal components which are uncorrelated and which are ordered so that the first few retain most of the variation present in all of the original variables Computation of the principal components reduces to the solution of an eigenvalue eigenvector problem for a positive semidefinite symmetric matrix Thus the definition and computation of principal components are straightforward but as will be seen this apparently simple technique has a wide variety of different applications as well as a number of different derivations Any feelings that principal component analysis is a narrow subject

should soon be dispelled by the present book indeed some quite broad topics which are related to principal component analysis receive no more than a brief mention in the final two chapters

Case-Based Reasoning Research and Development Kevin D. Ashley, 2003-06-11 The International Conference on Case Based Reasoning ICCBR is the preeminent international meeting on case based reasoning CBR ICCBR 2003 <http://www.iccbr.org> iccbr03 is the fifth in this series of biennial international conferences highlighting the most significant contributions to the field of CBR. The conference took place from June 23 through June 26, 2003 at the Norwegian University of Science and Technology in Trondheim, Norway. Previous ICCBR conferences have been held in Vancouver, Canada (2001), Seon G, many (1999), Providence, Rhode Island, USA (1997), and Sesimbra, Portugal (1995). Day 1 of ICCBR 2003 Industry Day provided hands-on experiences utilizing CBR in cutting-edge knowledge management applications, e.g., help desks, business and diagnostics. Day 2 featured topical workshops on CBR in the health sciences, the impact of life cycle models on CBR systems, mixed initiative CBR, predicting time series with cases, and providing assistance with structured vs. unstructured cases. Days 3 and 4 comprised presentations and posters on theoretical and applied CBR research and deployed CBR applications, as well as invited talks from three distinguished scholars: David Leake (Indiana University), Hector Munoz Avila (Lehigh University), and Ellen Rilov (University of Utah). The presentations and posters covered a wide range of CBR topics of interest both to practitioners and researchers, including case representation, similarity retrieval, adaptation, case library maintenance, multi-agent collaborative systems, data mining, soft computing, recommender systems, knowledge management, legal reasoning, software reuse, and music.
