Finite Geometries, Groups, and Computation

Alexander Hulpke, Robert Liebler, Tim Penttila, Akos Seress, 2008-08-22. This volume is the proceedings of a conference on Finite Geometries, Groups and Computation that took place on September 4-9, 2004 at Pingree Park, Colorado, a campus of Colorado State University. Not accidentally, the conference coincided with the 60th birthday of William Kantor, and the topics relate to his major research areas. Participants were encouraged to explore the deeper interplay between these fields. The survey papers by Kantor, O'Brien, and Penttila should serve to introduce both students and the broader mathematical community to these important topics and some of their connections, while the volume as a whole gives an overview of current developments in these fields.

Identities of Algebras and their Representations I. P. Itin, 1994

During the past forty years, a new trend in the theory of associative algebras, Lie algebras, and their representations has formed under the influence of mathematical logic and universal algebra, namely the theory of varieties and identities of associative algebras, Lie algebras, and their representations. The last twenty years have seen the creation of the method of 2 words and alpha functions, which allowed a number of problems in the theory of groups, rings, Lie algebras, and their representations to be solved in a unified way. The possibilities of this method are far from exhausted. This book sums up the applications of the method of 2 words and alpha functions in the theory of varieties and gives a systematic exposition of contemporary achievements in the theory of identities of algebras and their representations closely related to this method. The aim is to make these topics accessible to a wider group of mathematicians.
