

Chapter 4 – Scatter Diagrams and Correlation

Scatter Diagrams

Used for **bivariate** data to show if there is a relationship between two variables.

Explanatory variable (independent – the one that you are changing) is plotted on the x-axis.

Response Variable (dependent – the one you are measuring) is plotted on the y-axis.

Plot the points with crosses. Do not join them up.

Correlation

The relationship between two variables.

- **Positive Correlation** – As one variable increases, so does the other.
- **Negative Correlation** – As one variable increases, the other decreases.
- **Zero Correlation** – The points are randomly scattered.

- **Linear Correlation** – When the points lie close together near a straight line.
- **Non-Linear Correlation** – when the points lie close together but the pattern formed by them is a curve.

Causal Relationships

Causation – When one variable causes a change in another.

Correlation shows that there may be a link between two variables. Correlation does not imply causation.

Example:

Causal Relationship – increase in temperature = increase in ice cream sales

Correlation only – sales of chocolate and sales of clothes having a positive correlation.

Multiple factors – In real life situations there are usually multiple factors interacting to cause variables to change.

Example: A positive correlation between fat in liver and reaction time does not mean one causes the other. There could be a third variable, such as amount of alcohol consumed, which both variables depend on.

Line of Best Fit (LOBF)

A straight line drawn through the middle of the points so the points are evenly scattered on either side of the line.

Needs to be a straight line.

Needs to be close to as many points as possible.

Has to go through the mean point.

The closer the points are to the LOBF, the stronger the correlation.

$$\text{Mean Point } (\bar{x}, \bar{y}) = (\text{Mean of } x \text{ values}, \text{Mean of } y \text{ values})$$

Interpolation and Extrapolation

Using the LOBF to make predictions of unknown values.

Interpolation – When the LOBF is used to make predictions **within the range of data** given (you don't need to extend your LOBF more).

Tends to be **reliable** provided the LOBF is correct.

Extrapolation – When the LOBF is used to predict values **outside of the range of values** given (you may need to extend your LOBF for this).

Not always reliable as trends may change.

Values estimated from extrapolation are less reliable the further they are from the range of data.

Equation of LOBF

LOBF is also known as Regression Line.

$$\text{Eqn of LOBF: } y = ax + b$$

where a is the gradient and b is the y-intercept.

Gradient, a – The rate of increase of the response variable in relation to explanatory variable.

y-intercept, b – The value of the response variable when explanatory variable is 0.

Drawing Regression Line:

1. Use equation of LOBF to **calculate coordinates** of two points.
2. **Plot these points** on the scatter graph.
3. **Join them up** with a straight line (extend your line a little if you need to).

Finding Equation of LOBF/Regression Line:

1. **Select 2 points** on the graph – pick 2 points on the corners of the square for more accurate readings. Call these 2 points (x_1, y_1) and (x_2, y_2) .
2. Calculate the gradient, a .

$$a = \frac{y_2 - y_1}{x_2 - x_1}$$

3. Find the y-intercept, b .

You could do this by:

- a. Read the point of the graph by extending the LOBF.

- b. Use the formula $b = y_1 - ax_1$ using one of the 2 points you used for the gradient.

4. Write the equation in the form **$y = ax + b$** with the correct values for a and b .

Foundations of Data Organization and Algorithms Witold Litwin, 1989-06-07 The Third International Conference on Foundations of Data Organization and Algorithms has been organized by INRIA in Paris from June 21 to 23 1989 Previous FODO Conferences were held in Warsaw 1981 and in Kyoto 1985 The goal of this year's conference is to present advances in techniques of permanent and temporary data organization in different fields New applications such as image processing graphics geographic data processing robotics office automation information systems language translation and expert systems have developed various data organizations and algorithms specific to the application requirements The growing importance of these applications has created a need for general studies on data organization and algorithms as well as for specific studies on new database management systems and on filing services The articles submitted for the conference were subject to the usual rigorous reviewing process and selected on that basis They offer an excellent snapshot of the state of the art in the field and should prove invaluable for computer scientists faced by the problems of data organization which are raised by these new applications

Energy Research Abstracts, 1984 *Introduction to the New Statistics* Geoff Cumming, Robert Calin-Jageman, 2024-03-21 This fully revised and updated second edition is an essential introduction to inferential statistics It is the first introductory statistics text to use an estimation approach from the start and also to explain the new and exciting Open Science practices which encourage replication and enhance the trustworthiness of research The estimation approach with meta analysis the new statistics is exactly what's needed for Open Science Key features of this new edition include Even greater prominence for Open Science throughout the book Students easily understand basic Open Science practices and are guided to use them in their own work There is discussion of the latest developments now being widely adopted across science and medicine Integration of new open source *esci* Estimation Statistics with Confidence Intervals software running in *jamovi* This is ideal for the book and extends seamlessly to what's required for more advanced courses and also by researchers See www.thenewstatistics.com *itns esci jesci* Colorful interactive simulations including the famous dances to help make key statistical ideas intuitive These are now freely available through any browser See www.esci.thenewstatistics.com Coverage of both estimation and null hypothesis significance testing NHST approaches with full guidance on how to translate between the two Effective learning strategies and pedagogical features to promote critical thinking comprehension and retention Designed for introduction to statistics data analysis or quantitative methods courses in psychology education and other social and health sciences researchers interested in understanding Open Science and the new statistics will also appreciate this book No familiarity with introductory statistics is assumed
