

Science mark scheme terms for teachers

Term	Definition
NOT	This indicates that an incorrect answer is not to be disregarded but cancels another otherwise correct alternative offered by the learner. I.e. right plus wrong penalty applies.
IGNORE	The alternative to NOT – an incorrect answer that can be disregarded - is sometimes expressed in the mark schemes as IGNORE.
AND	This indicates that both answers are required to score the mark.
e.c.f.	This means "error carried forward". This indicates that if a learner has made an earlier mistake and has carried his or her incorrect value forward to subsequent stages of working, he or she may be given marks indicated by e.c.f. provided his or her subsequent working is correct, bearing in mind his or her earlier mistake. This prevents a learner being penalised more than once for a mistake, but only applies to marks annotated "e.c.f."
e.e.o.o.	The learner loses marks for "each error or omission".
c.a.o.	Accept the "correct answer only" for the mark.
o.w.t.t.e.	This means "Or words to that effect" and should be used if the learner has written an answer that is different to that stated in the mark scheme but answer still assumes the same meaning.
o.e.	This means "Or equivalent" and should be used where an answer is given that has the same meaning and is relevant in the context of the question.
l.s.w.	Where "Ignore subsequent workings" is shown, any workings that are shown for the response to a further question can be ignored as it is not required for the marks.
s.o.i	This means "Seen or implied". Similar to "or equivalent", this should be used where the response to an answer has been seen previously or is implicit within another area where the learner has responded, e.g. a diagram.
o.r.a	This means "Or reverse argument" and should be used where a learner has given the reverse or opposite response as that stated in the mark scheme. In most cases this still shows an understanding of the concept being assessed.

The Heinemann Science Scheme Ian Bradley, Peter Gale, Mark Winterbottom, 2001 Helping you get the best from QCA's scheme of work *Heinemann Science Scheme Pupil Book 1* Ian Bradley, Peter Gale, Mark Winterbottom, 2001 The Heinemann Science Scheme offers an approach to the QCA's Scheme of Work Teacher's resource packs provide support with lesson planning with each chapter matching the Scheme of Work and in built assessment The scheme aims to improve on the Scheme of Work by building in progression and a comprehensive revision programme to help prepare pupils for their National Tests It also aims to make the Scheme of Work accessible to all pupils The scheme builds on what students already know following on from the Scheme of Work at Key Stages 1 and 2 It takes into account what pupils already know at the start of Key Stage 3 and builds from there The Heinemann Science Scheme is also designed to build on the literacy and numeracy work pupils have done in primary schools **Scientific and Technical Aerospace Reports**, 1988 Civil Service Year Book Cabinet Office Staff, 2003 *Point Group Symmetry Applications* Philip H. Butler, 2012-12-06 The mathematical apparatus of group theory is a means of exploring and exploiting physical and algebraic structure in physical and chemical problems The existence of structure in the physical processes leads to structure in the solutions For group theory to be useful this structure need not be an exact symmetry although as examples of exact symmetries we have that the identity of electrons leads to permutation symmetries in many electron wave functions the spatial structure of crystals leads to the Bloch theory of crystal eigenfunctions and the rotational invariance of the hydrogenic Hamiltonian leads to its factorization into angular and radial parts In the 1930's Wigner extended what is known to mathematicians as the theory of group representations and the theory of group algebras to study the coupling coefficients of angular momentum relating various properties of the coefficients to the properties of the abstract group of rotations in 3 space In 1949 Racah in a paper on rare earth spectra showed that similar coefficients occur in other situations Immediately a number of studies of the coefficients were begun notably by Jahn with his applications in nuclear physics In the years since then a large number of physicists and chemists have added to the development of a general theory of the coefficients or have produced specialized tables for a specific application Applications now range from high energy physics to biology **The Summary of Engineering Research** University of Illinois at Urbana-Champaign.
