The Science Of Human Nature A Psychology For Beginners:

The Science of Human Nature William Pyle, 2014-11-12 The Science of Human Nature A Psychology for Beginners by William Henry Pyle With Class Exercises There are at least two possible approaches to the study of psychology by teacher training students in high schools and by beginning students in normal schools One of these is through methods of teaching and subject matter The other aims to give the simple concrete facts of psychology as the science of the mind The former presupposes a close relationship between psychology and methods of teaching and assumes that psychology is studied chiefly as an aid to teaching The latter is less complicated The plan contemplates the teaching of the simple fundamentals at first and applying them incidentally as the occasion demands This latter point of view is in the main the point of view taken in the text The author has taught the material of the text to high school students to the end that he might present the fundamental facts of psychology in simple form You are beginning the study of human nature You cannot study human nature from a book you must study yourself and your neighbors This book may help you to know what to look for and to understand what you find but it can do little more than this It is true this text gives you many facts learned by psychologists but you must verify the statements or at least see their significance to you or they will be of no worth to you However the facts considered here properly understood and assimilated ought to prove of great value to you But perhaps of greater value will be the psychological frame of mind or attitude which you should acquire The psychological attitude is that of seeking to find and understand the causes of human action and the causes consequences and significance of the processes of the human mind If your first course in psychology teaches you to look for these things gives you some skill in finding them and in using the knowledge after you have it your study should be quite worth while This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers The Science of Human Nature William Henry Pyle, 2013-04-20 The Science of Human Nature A Psychology for Beginners By William Henry Pyle This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we

make others different How can we make ourselves more efficient How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers *The Science of Human Nature* William Henry Pyle,2014-03 This is a reproduction of a book published before 1923 This book may have occasional imperfections such as missing or blurred pages poor pictures errant marks etc that were either part of the original artifact or were introduced by the scanning process We believe this work is culturally important and despite the imperfections have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide We appreciate your understanding of the imperfections in the preservation process and hope you enjoy this valuable book The below data was compiled from various identification fields in the bibliographic record of this title This data is provided as an additional tool in helping to ensure edition identification The Science Of Human Nature A Psychology For Beginners Teacher Training Series William Henry Pyle Silver Burdett Psychology **The Science of Human Nature** William Henry Pyle,2018-09-02 This statement represents the general scheme well enough but leaves out an important detail The nerve does not extend directly to a muscle but ordinarily goes by way of the brain The brain is merely a great group of nerve cells and fibers which have developed as a central organ where a stimulation may pass from almost any sense organ to almost any muscle But another importance attaches to the brain When a sense organ is stimulated and this stimulation passes on to the brain and agitates a cell or group of cells there we are conscious Consciousness shifts and changes with every shift and change of the stimulation The brain has still another important characteristic After it has been stimulated through sense organ and nerve a similar brain activity can be revived later and this revival is the basis of memory When the brain is agitated through the medium of a sense organ we have sensation *The Science of Human Nature a Psychology for Beginners* William Henry Pyle,2015-06-25 Excerpt from The Science of Human Nature a Psychology for Beginners This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended

AUTHOR S PREFACE This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient How can we make our lives more worth while This book is a manual intended to help young people to obtain such knowledge of human nature as will enable them to answer these questions I have not attempted to write a complete text on psychology There are already many such books and good ones too I have selected for treatment only such topics as young students can study with interest and profit I have tried to keep in mind all the time the practical worth of the matters discussed and the ability and experience of the intended readers

TO THE TEACHER This book can be only a guide to you You are to help your students study human nature You must to some extent be a psychologist yourself before you can teach psychology You must yourself be a close and scientific student of human nature Develop in the students the spirit of inquiry and investigation Teach them to look to their own minds and their neighbor s actions for verification of the statements of the text Let the students solve by observation and experiment the questions and problems raised in the text and the exercises The exercises should prove to be the most valuable part of the book The first two chapters are the most difficult but ought to be read before the rest of the book is studied If you think best merely read these two chapters with the pupils and after the book is finished come back to them for careful study In the references I have given parallel readings for the most part to Titchener Pillsbury and Münsterberg I have purposely limited the references partly because a library will not be available to many who may use the book and partly because the young student is likely to be confused by much reading from different sources before he has worked out some sort of system and a point of view of his own Only the most capable members of a high school class will be able to profit much from the references given

TO THE STUDENT You are beginning the study of human nature You can not study human nature from a book you must study yourself and your neighbors This book may help you to know what to look for and to understand what you find but it can do little more than this It is true this text gives you many facts learned by psychologists but you must verify the statements or at least see their significance to you or they will be of no worth to you However the facts considered here

properly understood and assimilated ought to prove of great value to you But perhaps of greater value will be the psychological frame of mind or attitude which you should acquire The psychological attitude is that of seeking to find and understand the causes of human action and the causes consequences and significance of the processes of the human mind If your first course in psychology teaches you to look for these things gives you some skill in finding them and in using the knowledge after you have it your study should be quite worth while W H PYLE **The Science of Human Nature a Psychology for Beginners (Classic Reprint)** William Henry Pyle,2017-11-21 Excerpt from The Science of Human Nature a Psychology for Beginners Each Science has its own particular field Zoology undertakes to answer every reasonable question about animals botany about plants physics about motion and forces chemistry about the composition of matter astronomy about the heavenly bodies etc The world has many aspects Each science under takes to describe and explain some particular aspect To understand all the aspects of the world we must study all the sciences About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works The Science of Human Nature William Henry Pyle,2016-07-31 The Science of Human Nature A Psychology for Beginners is a work by William Henry Pyle now brought to you in this new edition of the timeless classic **The Science of Human Nature (Esprios Classics)** William Henry Pyle,2021-04-09 This book is written for young students in high schools and normal schools No knowledge can be of more use to a young person than a knowledge of himself no study can be more valuable to him than a study of himself A study of the laws of human behavior that is the purpose of this book What is human nature like Why do we act as we do How can we make ourselves different How can we make others different How can we make ourselves more efficient *Psychology for Beginners* William Henry Pyle,2015-01-31 This book can be only a guide to you You are to help your students study human nature You must to some extent be a psychologist yourself before you can teach psychology You must yourself be a close and scientific student of human nature Develop in the students the spirit of inquiry and investigation Teach them to look to their own minds and their neighbor s actions for verification of the statements of the text Let the students solve by observation and experiment the questions and problems raised in the text and the exercises The exercises should prove to be the most valuable part of the book The first two chapters are the most difficult but ought to be read before the rest of the book is studied If you think best merely read these two chapters with the pupils and after the book is finished come back to them for careful study In the references I have given parallel readings for the most part to Titchener Pillsbury and M nsterberg I have purposely limited the references partly because a library will not
