**Covert Plants** Prudence Gibson, Baylee Brits, 2018 *Covert Plants* contributes to newly emerging discourses on the implications of vegetal life for the arts and culture This stretches to changes in our perception of nature and to the adapting roles of botany evolutionary ecology and environmental aesthetics in the humanities Its editors and contributors seek various expressions of vegetal life rather than the mere representation of such and they proceed from the conviction that a rigorous approach to thinking with and through vegetal life must be interdisciplinary At a time when urgent calls for restorative care and reparative action have been sounded for the environment this essay volume presents a range of academic and creative perspectives from evolutionary biology to literary theory philosophy to poetry which respond to the perplexing problems and paradoxes of vegetal thinking Representations of vegetal life often include plant analogies and plant imagery These

representations have at times obscured the diversity of plant behavior and experience Covert Plants probes the implications of vegetal life for thought and how new plant science is changing our perception of the vegetal around us and in us How can we think speak and write about plant life without falling into human nature dyads or without tumbling into reductive theoretical notions about the always complex relations between cognition and action identity and value subject and object A full view of this shifting perspective requires a stereoscopic lens through which to view plants but also simultaneously to alter our human centered viewpoint Plants are no longer the passive object of contemplation but are increasingly resembling subjects stakeholders or actors As such the plant now makes unprecedented demands upon the nature of contemplation itself Moreover the aesthetic political and legal implications of new knowledge regarding plants ability to communicate sense and learn require intensive cross disciplinary investigation By doing this we can intervene into current attitudes to climate change and sustainability and hopefully revise for the better human philosophies ethics and aesthetics that touch upon plant life

**Sensory Biology of Plants** Sudhir Sopory, 2019-11-09 Plants provide a source of survival for all life on this planet They are able to capture solar energy and convert it into food feed wood and medicines Though sessile in nature over many millions of years plants have diversified and evolved from lower to higher life forms spreading from sea level to mountains and adapting to different ecozones They have learnt to cope with challenging environmental conditions and various abiotic and biotic factors Plants have also developed systems for monitoring the changing environment and efficiently utilizing resources for growth flowering and reproduction as well as mechanisms to counter the impact of pests and diseases and to communicate with other biological systems like microbes and insects This book discusses the awareness of plants and their ability to gather information through the perception of environmental cues such as light gravity water nutrients touch and sound and stresses It also explores plants biochemical and molecular computing of the information to adjust their physiology and development to the advantage of the species Further it examines how plants communicate between their different organs and with other organisms as well as the

concepts of plant cognition experience and memory from both scientific and philosophical perspectives Lastly it addresses the phenomenon of death in plants The epilogue presents an artist s view of the beauty of the natural world especially plant architecture The book provides historical perspectives comparisons with animal systems where needed and general biochemical and molecular concepts and themes Each chapter is selfcontained but also includes cross talk with other chapters to offer an integrated view of plant life and allow readers to appreciate and admire the functioning of plant life from within and without The book is a tribute by the Editor to his students colleagues and co workers and to those in whose labs he has worked
