Understanding Physics: Teacher Guide David Cassidy, Gerald Holton, F. James Rutherford, 2008-04-08. *Understanding Physics* is a completely revised, updated and expanded edition of the Project Physics Course. It is an integrated introductory physics course developed with funding from the Carnegie Corporation and the Sloan Foundation and with the close cooperation of Springer Verlag New York. In approach and content *Understanding Physics* follows the trail blazed by the earlier versions but it includes more recent developments in physics and a stronger emphasis on the relationships among physics, technology and society. We have sought especially to incorporate the salient lessons of recent physics education research and practical experience gained in the classroom. The Audience: *Understanding Physics* is written primarily for

undergraduate college students not intending at least initially to enter careers in science or engineering. These may include liberal arts students, business majors, prelegal and prospective architecture students. We have found that when the course is taken with laboratory work, it has been deemed suitable by medical schools for premedical students.

The Oxford Guide to the Atlantic Languages of West Africa Friederike Lüpke, 2025-06-17. This volume presents the first book-length overview of the Atlantic languages, a small family of languages spoken mainly on the Atlantic coast of West Africa. Languages in this area have been used in diverse multilingual societies with intense language contact for the whole of their known history, and their genealogical relatedness and the impact of language contact on their lexicon and grammar have been widely debated. The book is divided into four parts. The first provides an introduction to language ecologies in the area and includes two accounts of the genealogical classification of Atlantic languages. Chapters in the second part offer grammatical overviews of individual languages, including the most important non-Atlantic contact languages, Casamance Creole and Mandinka, while the third part explores Atlantic languages from a typological perspective, with chapters that explore formal and semantic aspects of their nominal classification systems, nominalization strategies, their rich system of verbal extensions, and the stem-initial consonant mutation that is attested in a subset of languages. The final part of the book investigates Atlantic languages in their social environments, including the creation of creole identities, secret languages, Ajami writing practices, language acquisition, the spread and use of Fula as a lingua franca, digital language practices, and language ideologies. The volume is an essential tool for linguists interested in the languages of West Africa, language history, and classification patterns of language use in Atlantic societies, and typology and language contact more broadly.
