**Reports and Documents** United States. Congress, **Scientific and Technical Aerospace Reports** ,1989 U.S. *Government Research Reports* ,1962 NASA Scientific and Technical Reports United States. National Aeronautics and Space Administration Scientific and Technical Information Division,1967 **Hearings, Reports and Prints of the House Committee on Appropriations** United States. Congress. House. Committee on Appropriations,1972 **A Selected Listing of NASA Scientific and Technical Reports for ...** United States. National Aeronautics and Space Administration. Scientific and Technical Information Division,1966 **Transactions of the International Astronomical Union: Reports on Astronomy** C. de Jager,2012-12-06 This volume contains the fifteenth tri annual reports of the Presidents of the forty Commissions of the International Astronomical Union it refers to the progress in our discipline during the three years 1970 1971 and 1972 As compared to earlier volumes a gradual change in character is unmistakable The ever increasing flow of publications combined with the obvious necessity to keep the Reports at a reasonable size and price level has gradually forced the Commission Presidents to be more selective than before in drafting their Reports I have certainly stimulated them into that direction in order that Reports like these be valuable and lasting it seems imperative that the individual contributions have the character of a critical overall review where a fairly complete summary is given of the major developments and discoveries of the past three years and in which the broad developments and new trends be clearly outlined while at the same time essential problems for future research are identified With respect to the latter item I have suggested the Commission Presidents to add to their reports a brief section on scientific priorities for future research in the field of their Commissions In order to save space I have suggested to Commission Presidents that references to published papers are given on the basis of their number in the published issues of Astronomy and Astrophysics Abstracts For instance the indication 06 078 019 or AAA 06 078 **A Selected Listing of NASA Scientific and Technical Reports for 1966** United States. National Aeronautics and Space Administration. Scientific and Technical Information Division,1967 **Facing Up** Steven Weinberg,2012-03-01 Defending the spirit of science against its cultural adversaries these essays express a viewpoint that is reductionist realist and devoutly secular Together they afford the general reader the unique pleasure of experiencing the superb sense understanding and knowledge of one of the most interesting and forceful scientific minds of our era

**Cosmology and Controversy** Helge Kragh,2021-03-09 For over three millennia most people could understand the universe only in terms of myth religion and philosophy Between 1920 and 1970 cosmology transformed into a branch of physics With this remarkably rapid change came a theory that would finally lend empirical support to many long held beliefs about the origins and development of the entire universe the theory of the big bang In this book Helge Kragh presents the development of scientific cosmology for the first time as a historical event one that embroiled many famous scientists in a controversy over the very notion of an evolving universe with a beginning in time In rich detail he examines how the big bang theory drew

inspiration from and eventually triumphed over rival views mainly the steady state theory and its concept of a stationary universe of infinite age In the 1920s Alexander Friedmann and Georges Lemaître showed that Einstein's general relativity equations possessed solutions for a universe expanding in time Kragh follows the story from here showing how the big bang theory evolved from Edwin Hubble's observation that most galaxies are receding from us to the discovery of the cosmic microwave background radiation Sir Fred Hoyle proposed instead the steady state theory a model of dynamic equilibrium involving the continuous creation of matter throughout the universe Although today it is generally accepted that the universe started some ten billion years ago in a big bang many readers may not fully realize that this standard view owed much of its formation to the steady state theory By exploring the similarities and tensions between the theories Kragh provides the reader with indispensable background for understanding much of today's commentary about our universe *Frontiers of Science--II*, 1979 *Nuclear Science Abstracts*, 1974 *The Renaissance of General Relativity in Context* Alexander S. Blum, Roberto Lalli, Jürgen Renn, 2020-11-12 This contributed volume explores the renaissance of general relativity after World War II when it transformed from a marginal theory into a cornerstone of modern physics Chapters explore key historical processes related to the theory of general relativity in addition to presenting a thorough treatment of the relevant science behind these episodes A broad historiographical framework is introduced first thus providing the broad context in which the given computational approaches and case studies occurred Written by an international and interdisciplinary group of expert authors these chapters will bring readers to a more complete understanding of Einstein's theory Specific topics include Social and citation networks The Fock Infeld dispute Wheeler's turn to gravitation theory The position of general relativity in theories of fundamental interactions The pursuit of a quantum theory of gravity The emergence of dark matter in relation to cosmological models Institutional frameworks for gravitational wave search in Europe The Renaissance of General Relativity in Context is ideal for historians philosophers and sociologists of science Students and researchers in physics will also be interested in the topics explored **Hearings, Reports and Prints of the Senate Committee on Labor and Public Welfare** United States. Congress. Senate. Committee on Labor and Public Welfare, 1967 **Joe Pawsey and the Founding of Australian Radio Astronomy** W. M. Goss, Claire Hooker, Ronald D. Ekers, 2023-01-10 This open access book is a biography of Joseph L Pawsey It examines not only his life but the birth and growth of the field of radio astronomy and the state of science itself in twentieth century Australia The book explains how an isolated continent with limited resources grew to be one of the leaders in the study of radio astronomy and the design of instruments to do so Pawsey made a name for himself in the international astronomy community within a decade after WWII and coined the term radio astronomy His most valuable talent was his ability to recruit and support bright young scientists who became the technical and methodological innovators of the era building new telescopes from the Mills Cross and Chris Christiansen Cross to the Parkes radio telescope The development of aperture synthesis and the controversy surrounding the cosmological interpretation of the first major

survey which resulted in the Sydney research group's disagreements with Nobel laureate Martin Ryle play major roles in this story. This book also shows the connections among prominent astronomers like Oort, Minkowski, Baade, Struve, famous scientists in the UK such as J. A. Ratcliffe, Edward Appleton, and Henry Tizard, and the engineers and physicists in Australia who helped develop the field of radio astronomy. Pawsey was appointed the second Director of the National Radio Astronomy Observatory, Green Bank, West Virginia, in October 1961; he died in Sydney at the age of 54 in late November 1962. Upper level students, scientists, and historians of astronomy and technology will find the information, much of it from primary sources relevant to any study of Joseph L. Pawsey or radio astronomy. This open access book includes a Foreword by Woodruff T. Sullivan II.
