Sanders-Bush, 2012-12-06 Serotonin 5 HT was isolated and chemically characterized nearly four decades ago and is now generally accepted to function as a neurotransmitter and neuromodulatory agent Early research focused on the measurement of concentrations synthesis and metabolism of 5 HT and only recently has the focus shifted to characterization of 5 HT receptors Gaddum and Picarelli first suggested in 1957 that the effect of 5 HT in the guinea pig ileum is mediated by two pharmacologically distinguishable receptors however the possibility of dual 5 HT receptors was not explored systematically or successfully until the past decade It is now clear that more perhaps many more subclasses of 5 HT receptors exist The purpose of this book is to provide an up to date report on 5 HT receptors This is a difficult task considering the astonishing speed at which research in this field is expanding As the first of what we can expect to be a steady stream of monographs focusing on 5 HT receptors the book confirms that we are in an exciting time in the history of 5 HT For those of us who have been working on 5 HT for many years our dream of equal progress and recognition with the more extensively studied catecholamines is finally being realized We now have a Serotonin Club that held its first international scientific meeting in 1987 and several more international meetings are in the planning stages **Psychopharmacology Abstracts** ,1970

G HASENFUSS E MARBAN Heart failure embodies the central irony of modern medicine As we have become increasingly adept at treating the major proximate causes of death in Western society we have effectively converted acute illness into chronic malady The last twenty years have witnessed a revolution in the treatment of acute coronary syndromes myocardial infarction in particular Patients who reach the hospital now have every expectation of leaving alive but not necessarily well Our ability to blunt the edge of ischemic insults has engendered new problems a new cohort of patients whose hearts function well enough to enable short term survival but at the cost of decreased exercise tolerance dyspnea and increased long term mortality The irony is compounded by our increasingly sophisticated pharmacopeia for the treatment of heart failure which by slowing the progression of ventricular dysfunction has created a chronic illness The fact of its chronicity makes heart failure no less deadly In symptomatic patients mortality exceeds 5 10% per year even with the best contemporary therapy Not all heart failure is ischemic of course but the final common phenotype is eerily concordant regardless of the proximate cause No wonder then that heart failure is the leading cause of hospitalization in America and in Western Europe and that the prevalence of the disease continues to rise Drugs have indeed revolutionized heart failure therapy ACE inhibitors and beta adrenergic blockers having the most outstanding records to date

**Medicus** ,1981 Adult Neurogenesis: Beyond Rats and Mice Luca Bonfanti,Irmgard Amrein,2019-02-11 Researchers working on adult neurogenesis have focused largely on inbred laboratory rodents While this provides a strong advantage of

restricting genetic variation in the group it also narrows our perspective on adult neurogenesis as a biological phenomenon Many unsolved issues and open questions cannot be resolved without the contribution of comparative studies spanning through widely different species how did adult neurogenesis evolve what is the link between adult neurogenesis and brain complexity how do adult neurogenesis and animal behavior influence each other how does adult neurogenesis contribute to brain plasticity cognition and possibly repair and how do experimental conditions affect adult neurogenesis The main message from the comparative approach to adult neurogenesis is that the relative exclusive focus on laboratory rodents can result in a bias on how we think about this biological process
