any course touching on environmental issues or social responsibility in sport and essential reading for any sport manager looking to improve their professional practice Australian Environmental Planning Jason Byrne, Neil Sipe, Jago Dodson, 2014-04-16 Winner of the Planning Institute of Australia's 2015 Cutting Edge Research and Teaching Award

Australians from all walks of life have begun to realise the nation's cities cannot sustain profligate growth indefinitely. Dwindling water supplies, failing food bowls, increased energy costs, more severe bushfires, severe storms, flooding, coastal erosion, rising transport expenses, housing shortages and environmental pollution are now daily news headlines. Australia's cities may have reached their ecological limits; a new model for planning the places we live is needed. Understanding the natural cycles of the city is just as important to planning our cities as knowledge of local ordinances; indeed, much more so. A profound knowledge of environmental processes is critical for successful planning in today's world. Environmental planners take as their guiding principle the concept of designing with nature, approaching cities as living organisms that consume water, energy and raw materials and produce waste. This metabolic view of cities means we can find new solutions to old problems and steer our cities towards a more sustainable form of planning. Written specifically for students and professionals working in city planning in Australia, this ground-breaking new book enables Australian planners, architects and developers to get a better understanding of the fundamental principles of environmental planning for cities, showing how land, water, air, energy, wildlife and people shape our built environments and how, in turn, environmental processes must be better understood if we are to make informed decisions about developing cities that are more sustainable. The book's coverage is comprehensive, from an overview of the concepts and theories of environmental planning through analysis of governance systems and urban environmental processes to agendas and policies for the future; all the key topics are covered in depth with recommendations for supporting reading and an unrivalled selection of additional materials. Ideal for students, essential for professionals.

Australian Environmental Planning is vital reading for more sustainable cities in a more sustainable world **Ethical Corporation Magazine**, 2009-02 **Sustainable Environmental Engineering** Walter Z. Tang, Mika Sillanpää, 2018-10-16

The important resource that explores the twelve design principles of sustainable environmental engineering. Sustainable Environmental Engineering (SEE) is to research, design and build Environmental Engineering Infrastructure Systems (EEIS) in harmony with nature using life cycle cost analysis and benefit analysis and life cycle assessment and to protect human health and environments at minimal cost. The foundations of the SEE are the twelve design principles (TDPs) with three specific rules for each principle. The TDPs attempt to transform how environmental engineering could be taught by prioritizing six design hierarchies through six different dimensions. Six design hierarchies are prevention, recovery, separation, treatment, remediation and optimization. Six dimensions are integrated system, material economy, reliability, on spatial scale, resiliency, on temporal scale and cost effectiveness. In addition, the authors, two experts in the field, introduce major computer packages that are useful to solve real environmental engineering design problems. The text presents how specific environmental

engineering issues could be identified and prioritized under climate change through quantification of air water and soil quality indexes For water pollution control eight innovative technologies which are critical in the paradigm shift from the conventional environmental engineering design to water resource recovery facility WRRF are examined in detail These new processes include UV disinfection membrane separation technologies Anammox membrane biological reactor struvite precipitation Fenton process photocatalytic oxidation of organic pollutants as well as green infrastructure Computer tools are provided to facilitate life cycle cost and benefit analysis of WRRF This important resource Includes statistical analysis of engineering design parameters using Statistical Package for the Social Sciences SPSS Presents Monte Carlos simulation using Crystal ball to quantify uncertainty and sensitivity of design parameters Contains design methods of new energy materials processes products and system to achieve energy positive WRRF that are illustrated with Matlab Provides information on life cycle costs in terms of capital and operation for different processes using MatLab Written for senior or graduates in environmental or chemical engineering Sustainable Environmental Engineering defines and illustrates the TDPs of SEE Undergraduate graduate and engineers should find the computer codes are useful in their EEIS design The exercise at the end of each chapter encourages students to identify EEI engineering problems in their own city and find creative solutions by applying the TDPs For more information please visit www.tang.fiu.edu
