Trilogy of Terror Alfonso Moret, 2013-02 Roman and Elsbone were veteran animal trappers and hunters They were warned by the Chalukyas tribesmen that the Devil Dogs were ferocious and did not fear man or any other animal The hunters were experienced predators and huntsmen and knew that the wild beast that the tribesmen were leery of were just Himalayan tempestuous wolves The Chalukyas tribesmen disclosed to the hunters that they had seen two Devil Dogs bring down a huge wild boar and tear it apart one evening at the base of the Mahila Mountains It is known amongst hunters and wildlife individuals that no wild animal beasts or man want any part of the violent desolate fierce boars these Devil Dogs were fearsome and vicious The major deciding factors that finally made the huntsmen want to seek and capture the wolves were these main issues One the Los Angeles zoo was offering a large amount of money for two legendary Devil Dogs from India The second aspect was they heard that a single Devil Dog had fought and killed a Siberian Tiger this factor increased their inquisitiveness and curiosity of this sensational beast and its folklore Their egos also played a part in their judgment to capture the animals An element they had to contemplate and had caused them concern was that they were told that the beast only come out after the sun has set Nightfall this is an advantageous factor for the nighttime predator So these beasts were nocturnal hunters this was not an odd characteristic for any wolf but still it was a concern for the hunters All these tidbits of information just enticed Roman and Elsbone even more and it heightened their hunting and ego desires The two English veteran hunters were now traveling toward their prey and compensations as they were now heading toward the foothills of the snowcapped Himalayas the hunting grounds of the Devil Dogs The huntsmen eventually had left their regular and familiar stomping grounds of South Africa years earlier because of the civil turmoil that continues to cause chaos and havoc with many of the unsettled tribes and conformed city dwellers The other object and issue was now there are all the new restrictions and hunting laws causing hardship on hunters and trappers also there were the conservation laws protecting the wild beast limiting them even more Elsbone and Roman left Africa and went and took their trade to South America But after some time they grew tired of the humid atmosphere the different language and customs along with the constant damp eerie rain forest So now they were here in India following the harsh rumors of the ferocious wild Devil Dogs that killed cattle pigs and villagers and now they also heard even killed mountain lions The hunters journey did have some hardships They needed to travel far through hot rough desolate deserts with very cold nights

Multi-scale Variability of Ecosystem

Functioning in European and Chinese Shelf Seas Xueen Chen, Qicheng Meng, Jie Nie, Wenyan Zhang, Jun Sun, Ute Daewel, 2024-08-26 Continued global warming and ocean acidification are predicted with high confidence while the direction and magnitude of changes of other atmospheric drivers e.g. precipitation wind and nutrient loading are of high uncertainty and regionally dependent Biogeochemical responses of coastal shelf seas to external drivers are often nonlinear involving

feedback that may amplify or dampen a perturbation imposed on the system Coupled physical biogeochemical process based numerical models have proven useful in elucidating the mechanistic interplay and relative importance of the different factors contributing to ecosystem functioning with increasing realism This research topic aims to understand and compare marine ecosystem functioning in Chinese and European shelf seas based on studies that use state of the art modeling and monitoring of coastal ecosystem dynamics This topic will enable more efficient knowledge share and distribution through a comparative assessment between distinct coastal shelf systems in China and Europe to further our understanding of complicated ecosystem dynamics in response to a changing climate and increasing anthropogenic pressure It will allow us to better understand the sensitivity of coastal shelf ecosystem functioning to physical and biogeochemical perturbations the role of shelf seas in global carbon cycling and the resilience of Chinese and European shelf seas to ongoing and future changes in climate and anthropogenic activities

Studies of the South China Sea Circulation and Thermal Structure Using a Three Dimensional Numerical Model Nathan L. Edmons, 1996 The seasonal ocean circulation and thermal structure in the South China Sea SCS were studied numerically using the Princeton Ocean Model POM with 20 km horizontal resolution and 23 sigma levels conforming to a realistic bottom topography A sixteen month control run was performed using climatological monthly mean wind stresses and restoring type salt and heat fluxes as surface forcing terms and observational oceanic inflow outflow at the open boundaries The seasonally averaged effects of isolated forcing terms are presented and analyzed from the following experiments 1 non linear effects removed 2 wind effects removed 3 open boundary inflow outflow set to zero and 4 open boundary inflow outflow doubled This procedure allowed analysis of spatial and temporal contributions of the isolated parameter to the general hydrology of the SCS and some of its specific features A coastal jet is identified and analyzed as are a mesoscale topographic gyre and several counter currents Non linearity is shown to be important to the energy and volume transport of baroclinic eddy features but otherwise insignificant Boundary transport from open lateral boundaries is determined to be of considerable importance to summer circulation and thermal structure with little effect found for the winter monsoon hydrology In general monsoonal circulation patterns and upwelling phenomena are determined and forced by the wind while boundary transport effects play a secondary role in determining the magnitude of the circulation velocities
