Mathematics and Metaphilosophy Justin Clarke-Doane,2022-06-30 This Element discusses the problem of mathematical knowledge and its broader philosophical ramifications It argues that the challenge to explain the defeasible justification of our mathematical beliefs the justificatory challenge arises insofar as disagreement over axioms bottoms out in disagreement over intuitions And it argues that the challenge to explain their reliability the reliability challenge arises to the extent that we could have easily had different beliefs The Element shows that mathematical facts are not in general empirically accessible contra Quine and that they cannot be dispensed with contra Field However it argues that they might be so plentiful that our knowledge of them is unmysterious The Element concludes with a complementary pluralism about modality logic and normative theory highlighting its surprising implications Metaphysically pluralism engenders a kind of perspectivalism and indeterminacy Methodologically it vindicates Carnap s pragmatism transposed to the key of realism
