*Narrative and Cognition in Literature and Science* Michael Sinding, Aura Heydenreich, Klaus Mecke, 2025-07-21 This volume explores cognitive perspectives on how science and narrative shape one another Narrative is a principle of cognition and cognition is fundamental to narrative This duality enables a deeper mapping of the feedback between story and the natural sciences Science as a culturally organized and systematic mode of knowing the world may seem opposed to narrative thinking Yet they are deeply interwoven Scientists tell many kinds of stories across genres and media In thought experiments lab experiments written arguments and histories and philosophies of fields they recount and interpret unfoldings of events at often uncanny scales from particle collisions to the evolution of life to cosmic expansion Science stories go beyond science Early science is entwined with myth religion and magic We still mythologize beneficent or evil geniuses the promises and perils of technology Teachers journalists politicians and lawyers all tell science stories for their own purposes Literary artists use scientific ideas and forms reimagining physical forces causality and time in storyworlds themes and figures This is the first cognition focused multi disciplinary analysis of these narrative science relations

*Futurist spaceflight meditations* Giulio Prisco, 2021-06-03 We must strenuously push toward our cosmic destiny

among the stars Beginning to expand beyond the Earth before it s too late is our most important task at this moment in history Many actors have important roles to play and there s room for everyone Spaceflight will also help find viable solutions for current developmental environmental and social problems But the road to the stars is full of impediments and roadblocks We will not advance as fast as we wish Therefore we must keep our mood strenuous and our drive strong We need an optimistic spaceflight culture oriented to the future with energizing visions of interplanetary interstellar and cosmic futures We also need a futurist space philosophy

### **At the Frontier of**

**Spacetime** Torsten Asselmeyer-Maluga, 2016-04-28 In this book leading theorists present new contributions and reviews addressing longstanding challenges and ongoing progress in spacetime physics In the anniversary year of Einstein s General

Theory of Relativity developed 100 years ago this collection reflects the subsequent and continuing fruitful development of spacetime theories The volume is published in honour of Carl Brans on the occasion of his 80th birthday Carl H Brans who also contributes personally is a creative and independent researcher and one of the founders of the scalar tensor theory also known as Jordan Brans Dicke theory In the present book much space is devoted to scalar tensor theories Since the beginning of the 1990s Brans has worked on new models of spacetime collectively known as exotic smoothness a field largely established by him In this Festschrift one finds an outstanding and unique collection of articles about exotic smoothness Also featured are Bell's inequality and Mach's principle Personal memories and historical aspects round off the collection

*The Otherworld in Myth, Folklore, Cinema, and Brain Science* Jim Kline, 2019-04-09 This volume explores a dimension of reality usually scoffed at by rational thinking individuals living in modern industrialized societies but still experienced by these same individuals when they are in a stage of sleep known as rapid eye movement REM sleep this is the stage in which vivid and bizarre dreams are a person's living reality While in this stage we believe what we experience is real but then deny its reality upon awakening as we go about our daily routines Yet in many cases a dream with vivid imagery and bizarre goings on is communicating with the dreamer in an archaic language directly associated with an Otherworld reality This reality exists within us and expresses concepts and ideas about our realm of existence that pertain to our waking lives as well as to an alternate archaic life with its own language and ideas transcending physical reality By studying various myths and folk tales along with cinematic portrayals of otherworldly experiences commentary from modern individuals and reports from traditional shamans who are experts at traversing the Otherworld reality this text discerns the features and characteristics of this supernatural realm Contemporary research into the Otherworld marks this realm as corresponding to the unconscious substratum of the human psyche what C G Jung referred to as the collective unconscious Certain scientists have found evidence of its connection with various aspects of brain functioning suggesting that the brain in many ways encourages a belief in the Otherworld However it would be a mistake to call the Otherworld a figment of the human imagination since this realm seems to have a type of physical existence The book considers the Otherworld to exist and provides reasons why rational thinking individuals are hesitant to accept its existence even when their brains are telling them the Otherworld is real and you have just experienced it
