Mental Health Policy in South Africa Claire Morrison, Pieter Fourie, Ubanesia Adams, 2025-08-15. This book investigates how mental health in South Africa is conceptualised and constructed in public policy. Critiquing embedded assumptions within existing policy documentation, the book advocates for policy solutions centred on poverty alleviation and economic development. Mental health in South Africa has historically been neglected within the health care system, a stark reality underscored by the Life Esidimeni tragedy which exposed widespread mismanagement, negligence and insufficient resources in mental health care services. While South Africa has enacted progressive mental health policies, their effective implementation remains hindered by systemic challenges. This book investigates the dominant problems represented in mental health policies, including the segregation of mental health from general health services, inadequate intersectoral collaboration, mental health care community disconnection from mental health services, the association between poverty and mental health issues, and infringements upon the rights of individuals with mental health problems. Overall, the book underscores mental health as a socio-economic issue requiring new policy solutions. This book will be an essential read for mental health professionals and policy makers in South Africa as well as for researchers working on the good governance of mental health both within the country and at global and multilateral levels.

Social Determinants of Mental Health Jessica Allen (Medical policy specialist), Michael Marmot, 2014. Good mental health is integral to human health and well-being. A person's mental health and many common mental disorders are shaped by various social, economic and physical environments operating at different stages of life. Risk factors for many common mental disorders are heavily associated with social inequalities, whereby the greater the inequality, the higher the inequality in risk. It is of major importance that action is taken to improve the conditions of everyday life, beginning before birth and progressing

into early childhood older childhood and adolescence during family building and working ages and through to older age Action throughout these life stages would provide opportunities for both improving population mental health and for reducing risk of those mental disorders that are associated with social inequalities Page 4 of cover Tasman's Psychiatry Allan Tasman,Michelle B.
