The Singular Objects Of Architecture:

The Singular Objects of Architecture Jean Baudrillard, Jean Nouvel, Robert Bononno, K. Michael Hays, 2005-10-01 A revelatory conversation between two major figures in visual culture Architecture Oriented Otherwise David Leatherbarrow, 2012-04-17 So much writing about architecture tends to evaluate it on the basis of its intentions how closely it corresponds to the artistic will of the designer the technical skills of the builder or whether it reflects the spirit of the place and time in which it was built making it not much more than the willful or even subconscious assemblage of objects that result from design and construction techniques Renowned writer and thinker David Leatherbarrow in this groundbreaking new book argues for a richer and more profound but also simpler way of thinking about architecture namely on the basis of how it performs Not simply how it functions but how it acts its manner of existing in the world including its effects on the observers and inhabitants of a building as well as on the landscape that situates it In the process Leatherbarrow transforms our way of discussing buildings from a passive technical or programmatic assessment to a highly active and engaged examination of the lives and performances intended and otherwise of buildings **Phenomenologies of the City** Henriette Steiner, Maximilian Sternberg, 2016-03-09 Phenomenologies of the City Studies in the History and Philosophy of Architecture brings architecture and urbanism into dialogue with phenomenology Phenomenology has informed debate about the city from social sciences to cultural studies Within architecture however phenomenological inquiry has been neglecting the question of the city Addressing this lacuna this book suggests that the city presents not only the richest but also the politically most urgent horizon of reference for philosophical reflection on the cultural and ethical dimensions of architecture The contributors to this volume are architects and scholars of urbanism Some have backgrounds in literature history religious studies and art history The book features 16 chapters by younger scholars as well as established thinkers including Peter Carl David Leatherbarrow Alberto Perez Gomez Wendy Pullan and Dalibor Vesely Rather than developing a single theoretical statement the book addresses architecture's relationship with the city in a wide range of historical and contemporary contexts The chapters trace hidden genealogies and explore the ruptures as much as the persistence of recurrent cultural motifs Together these interconnected phenomenologies of the city raise simple but fundamental questions What is the city for how is it ordered and how can it be understood The book does not advocate a return to a naive sense of unity or order Rather it investigates how architecture can generate meaning and forge as well as contest social and cultural representations International Research in the Field of Architecture I Gözde Çakır Kiasıf, 2024-09-30 Architecture is a discipline that synthesizes art and science by adopting a multidisciplinary design approach and supporting from different fields Architecture aims to reveal the right design by bringing together artistic creativity mathematical analytical thinking and effective problem solving abilities Architecture which determines the living comfort of users and their interaction with the environment as well as the structural and spatial characteristics of buildings causes problems that are very difficult to

compensate for if applied incorrectly Therefore architects have the desire to fulfill their responsibilities by meticulously addressing issues such as sustainability basic design historical environment protection structure and legislation This book which presents international research in the field of architecture and deals with different topics includes a total of six book chapters with the titles Evidence Based Lighting Design in Healthcare Facilities Evaluation of the Development Process of Sustainability in High Rise Buildings Through Leed Certified Norman Foster Projects From Botter Apartment to Casa Botter Art and Design Center An Exploration of the Semiotics Of Architecture Analysing Sustainable Office Buildings within the Scope of Human Health And Comfort Digital Transformation Executions in the Construction Industry The Role of Covid 19 and Spatial Analysis of Traditional Turkish Baths and Exemplification on Haseki Hürrem Sultan Bath *Architecture INTL* Nancy Solomon,2008-05-27 On the occasion of its 150th anniversary the American Institute of Architects asked more than 70 contributors to examine the complex and evolving of the American architects in shaping our cities and communities Through essays vignettes and profiles illustrated with more than 560 photographs Architecture provides a look at the breath and depth of the architecture profession and points to the significant contributions architects have made in all aspects of society Most important the book demonstrates the value of applying architectural thinking to the many serious issues from global warming and homeland security to accessibility and diversity facing our world today BOOK JACKET *The Architecture of Failure* Douglas Murphy,2012-02-24 Against those who consider architecture to be a wholly optimistic activity this book shows how the history of modern architecture is inextricably tied to ideas of failure and ruin By means of an original reading of the earliest origins of modernism the Architecture of Failure exposes the ways in which failure has been suppressed ignored and denied in the way we design our cities It examines the 19th century fantasy architecture of the iron and glass exhibition palaces strange unprecedented dream like structures almost all now lost existing only as melancholy archive fragments it traces the cultural legacy of these buildings through the heroics of the early 20th century post war radicals and recent developments discussing related themes in art literature politics and philosophy Critiquing the capitalist symbolism of the self styled contemporary avant garde the book outlines a new history of contemporary architecture and attempts to recover a radical approach to understanding what we build Douglas Murphy blogs at <http://www.youyouidiot.blogspot.com>

The Sociology of Architecture Paul Jones,2011-01-01 Drawing on sociological theories to assist understanding of how political power operates in the cultural sphere The Sociology of Architecture frames the discipline as a field of symbolic and material conflict over social identities This volume contests the notion of architecture as an apolitical endeavor and suggests that major architectural projects can act as tangible expressions of the ultimately contested nature of collective identities thus shedding light on how those with power both legitimate and mark their position in the world *Architecture for a Free Subjectivity* Dr Simone Brott,2013-06-28 Architecture for a Free Subjectivity reformulates the French philosopher Gilles Deleuze's model of subjectivity for architecture by surveying the prolific effects of architectural encounter and the spaces

that figure in them For Deleuze and his Lacanian collaborator Félix Guattari subjectivity does not refer to a person but to the potential for and event of matter becoming subject and the myriad ways for this to take place By extension this book theorizes architecture as a self actuating or creative agency for the liberation of purely impersonal effects Imagine a chemical reaction a riot in the banlieues indeed a walk through a city Simone Brott declares that the architectural object does not merely take part in the production of subjectivity but that it constitutes its own This book is to date the only attempt to develop Deleuze's philosophy of subjectivity in singularly architectural terms Through a screening of modern and postmodern American and European works this provocative volume draws the reader into a close encounter with architectural interiors film scenes and other arrangements while interrogating the discourses of subjectivity surrounding them and the evacuation of the subject in the contemporary discussion The impersonal effects of architecture radically changes the methodology just as it reimagines architectural subjectivity for the twenty first century **Envisioning**

Architecture Eugenio Morello, Barbara E. A. Piga, 2013 The New Architectural Pragmatism William S. Saunders, 2007 In response to the contentious process surrounding the selection of a design for the World Trade Center site the use of spectacular buildings to brand cities and institutions and the dizzying transformations of the skylines of Shanghai and Dubai public awareness of architecture and design has perhaps never been higher At the same time architecture itself is undergoing an identity crisis as it confronts fundamental issues the effect of digital technology on design the pervasive impact of global capitalism and whether to embrace or resist popular media and taste The New Architectural Pragmatism collects the most provocative penetrating and influential attempts by leading theorists and practitioners in the field to define what architectural practice should be at the beginning of the twenty first century Written in the aftermath of modernism's utopian impulse and postmodernism's detached playfulness the essays gathered here express and critique a new spirit of cultural and political engagement with contemporary society Interrogating the architect's social responsibility the contributors deliberate about how much we should ask of architecture and suggest that in the coming century architecture must be at once flexible and robust responsive and self directed Contributors Stan Allen George Baird Lucy Bullivant James Corner Hal Foster Kenneth Frampton K Michael Hays Dave Hickey Robert Levit Evonne Levy Reinhold Martin Jorge Silvetti Robert Somol Philippe Starck Roemer van Toorn Sarah Whiting Alejandro Zaera Polo William S Saunders is editor of Harvard Design Magazine and assistant dean for external relations at Harvard University's Graduate School of Design He is the editor of four previous Harvard Design Magazine Readers published by Minnesota **Architecture, Mentalities and Meaning**

Patrick Malone, 2017-06-14 In order to function architectural theory and practice must be shaped to suit current cultural economic and political forces Thus architecture embodies reductive logic that conditions the treatment of human and social processes which raises the question of how to define objectivity for architectural mentalities that must conform to a set of immediate conditions This book focuses on meaning and on the physical and mental processes that define life in built

environments The potential to draw knowledge from aesthetics psychology political economy philosophy geography and sociology is offset by the fact that architectural logic is inevitably reductive cultural socio economic and political However despite the duty to conform it is argued that the treatment of human processes and the understanding of architectural mentalities can benefit from interdisciplinary linkages small freedoms and cracks in a system of imperatives that can yield the means of greater objectivity This is valuable reading for students and researchers interested in architectural theory as a working reality and in the relationships between architecture and other fields

Hassan Fathy and Continuity in Islamic Architecture Ahmad Hamid, 2010 A thought provoking and richly illustrated look at tradition and innovation in the work of the world renowned architect

Jean Baudrillard Brian Gogan, 2017-11 This work is the first book length treatment of Jean Baudrillard as a rhetorical theorist

Matter: Material Processes in Architectural Production Gail Peter Borden, Michael Meredith, 2012-03-29 Combining essays from both practice and academia this book includes some of the most significant projects and thoughts on materiality from the last decade Beautifully illustrated with a great deal of technical information throughout it is not a coffee table book with no explanation of how nor a theory book without the description of the projects

Urban Constellations Zoë Thompson, 2016-02-11 This book investigates the iconic architectural cultural spaces of the contemporary cityscape as engines of regeneration Promising much to their fading locales these spaces locate culture in the space where production once ruled in order to revitalise post industrial urban

provinces With close attention to four sites across the UK *Urban Constellations* engages with the work of Walter Benjamin and Jean Baudrillard to read these spaces and in so doing offer a critical intervention into the theory and experience of contemporary cityscapes Developing the notion of surface ethnography as a methodological approach to examining the form of cultural experience produced by urban cultural spaces the author sheds light on the manner in which they transform cultural spectatorship express wider political and ecological concerns and offer differing views to the native and the tourist in the construction of local history The book also examines the decline of the idea that iconic projects can drive regeneration in the failures and delays that can beset such undertakings Offering a rich examination of the legacy of urban change in its most recent formulation that of cultural regeneration this book reveals the fragile potential of the spaces produced by contemporary dream houses and as such will be of interest to scholars of cultural studies sociology and social theory urban studies cultural geography and architecture

New Glass Architecture Brent Richards, Gilbert Dennis, 2006-01-01 A timely look at the ways in which glass is utilized in some of today's most beautiful and experimental building designs For centuries glass has provoked fascination with its properties as a versatile material that permits light to enter buildings in spectacular ways Much of modern architecture has been conceived by using glass to create increasingly minimal structures to promote the notion of lightweight construction solutions and to allow maximum daylight into buildings *New Glass Architecture* showcases the changing ways that aesthetics and methods for using glass have been developing since the 1990s The book begins with an introduction that traces the history of key moments in glass architecture from the stained glass windows of Chartres Cathedral to the Crystal Palace of 1851 and early constructions by John Soane Bruno Taut Le Corbusier and Mies van der Rohe Author Brent Richards explains the importance of glass artists in the second half of the 20th century and describes developments in glass technology over the last twenty years Beautifully illustrated with newly commissioned photographs by Dennis Gilbert the book features twenty five case studies of recent glass constructions from around the world by such leading architects as Foster and Partners Frank Gehry Herzog de Meuron Steven Holl Toyo Ito Associates Jean Nouvel Raphael Violy and Peter Zumthor Each building is illustrated in full color and accompanied by detailed drawings *New Glass Architecture* features these buildings and more Chapel of Ignatius Seattle Cond Nast Caf New York DZ Bank Berlin Kimmel Center for the Performing Arts Philadelphia Kunsthau Graz Austria Laban Dance Centre London Torre Agbar Barcelona

Mass Identity Architecture Jean Baudrillard, 2006-07-11 This new edition further explores the connection between the cultural analysis provided by the contemporary philosopher Jean Baudrillard and the new star of global culture architecture In a world in which images have become a substitute for reality i.e. simulacra capable of both stimulating and satisfying collective needs the question arises as to whether architecture could be seen as a super fetish capable of both mirroring and shaping western society's culture and identity The aim of this book is thus to provide new methodologies and to suggest new meanings for the comprehension and development of contemporary architecture In Baudrillard's terms

architecture could be seen as the supreme medium of contemporary visual culture especially in its potential to influence the individual's perception of reality as a component of the mass media system. This kind of cultural analysis of the built environment and its effect on everyday life is still a relatively new phenomenon both in the fields of critical theory and even more so in mainstream architectural criticism. This book, which forms a significant resource on the work of an immensely important writer, should appeal to a wide range of readers. Through highly evocative writing it provides a theoretical illuminating pathway for everyone who either directly or indirectly is involved or interested in architecture, urbanism and related subjects.

Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design Abusaada, Hisham, Vellguth, Carsten, Elshater, Abeer, 2019-06-28. The efficient usage, investigation and promotion of new methods, tools and technologies within the field of architecture, particularly in urban planning and design, is becoming more critical as innovation holds the key to cities becoming smarter and ultimately more sustainable. In response to this need, strategies that can potentially yield more realistic results are continually being sought. The *Handbook of Research on Digital Research Methods and Architectural Tools in Urban Planning and Design* is a critical reference source that comprehensively covers the concepts and processes of more than 20 new methods in both planning and design in the field of architecture and aims to explain the ways for researchers to apply these methods in their works. Pairing innovative approaches alongside traditional research methods, the physical dimensions of traditional and new cities are addressed in addition to the non-physical aspects and applied models that are currently under development in new settlements such as sustainable cities, smart cities, creative cities and intercultural cities. Featuring a wide range of topics such as built environment, urban morphology and city information modeling, this book is essential for researchers, academicians, professionals, technology developers, architects, engineers and policymakers.
