many exercises this book can be used as a text for a first course in number theory or for a subsequent course on arithmetic or diophantine geometry at the junior senior level

**The Joy of X** Steven Henry Strogatz, 2012 A delightful tour of the greatest ideas of math showing how math intersects with philosophy science art business current events and everyday life by an acclaimed science communicator and regular contributor to the New York Times

**Bridges between Science and Humanities** Maria Rosa Menzio, 2025-03-25 The book is an adventure into the parts of knowledge that are taken for granted Science and humanities have bridges that unite them and there is a whole hidden world of connections that we do not learn at school since teachers fixate on the division between the so called two cultures Here however we get to show how mathematics can be considered a humanistic subject and all science is a special branch of literature After all every scientific discovery can be treated and examined with the same categories that are used for fairy tales or novels Also sales techniques enter into scientific demonstrations much more deeply than it appears Therefore perhaps we should no longer talk about the rigor of science but about aesthetic research which should lead to approaching perfection and therefore the accuracy of things at least until the opposite is proved This volume is an interesting read for both academics and non specialists

**Ordinary Things and Their Extraordinary Meanings** Giuseppina Marsico, Luca Tateo, 2019-05-01 The book provides a new look at the everyday relationship between psychological processes and extraordinary aspects of ordinary phenomena Why should we deal with ordinary things People's life is made of everyday practical taken for granted things such as driving a car using money listening music etc When you drive from home to workplace you are migrating between contexts Is this an empty space you are crossing or the time you spend into the car is something meaningful In psychological terms things have at least three levels of existence a material a symbolic and an affective one The underlying idea is that the symbolic elaboration of everyday things is characterized by the transcendence of the particular object sign leading to the creation of more and more complex sign fields These fields expand according to an inclusive logic up to dialogically and dialectically incorporate opposites i e clean dirty transparent opaque hide show join divide slow fast etc Even the meaning of ordinary and extraordinary follow such an inclusive logic if you give a positive value to ordinary extraordinary is rule breaking otherwise if ordinary means trivial extraordinary assumes a positive value Besides things are cultural artifacts mediating the experience of the world the psychological processes and the construction of mind Reflecting upon things is thus a more meaningful pathway to understand Psyche
