*A Quantitative Tour of the Social Sciences* Andrew Gelman, Jeronimo Cortina, 2009-04-06 Social scientists become experts in their own disciplines but aren't always familiar with what is going on in neighboring fields To foster a deeper understanding of the interconnection of the social sciences economists should know where historical data come from sociologists should know how to think like economists political scientists would benefit from understanding how models are tested in psychology historians should learn how political processes are studied psychologists should understand sociological theories and so forth This overview by prominent social scientists gives an accessible non technical sense of how quantitative research is done in different areas Readers will find out about models and ways of thinking in economics history sociology political science and psychology which in turn they can bring back to their own work

**Ecological Indicators for the Nation** National Research Council, Commission on Geosciences, Environment, and Resources, Water Science and Technology Board, Board on Environmental Studies and Toxicology, Committee to Evaluate Indicators for Monitoring Aquatic and Terrestrial Environments, 2000-04-12 Environmental indicators such as global temperatures and pollutant concentrations attract scientists attention and often make the headlines Equally important to policymaking are indicators of the ecological processes and conditions that yield food fiber building materials and ecological services such as water purification and recreation This book identifies ecological indicators that can support U S policymaking and also be adapted to decisions at the regional and local levels The committee describes indicators of land cover and productivity species diversity and other key ecological processes explaining why each indicator is useful what models support the indicator what the measured values will mean how the relevant data are gathered how data collection might be improved and what effects emerging technologies are likely to have on the measurements The committee reviews how it arrived at its recommendations and explores how the indicators can contribute to policymaking Also included are interesting details on paleoecology satellite imagery species diversity and other aspects of ecological assessment Federal state and local decision makers as well as environmental scientists and practitioners will be especially interested in this new book

applications      **Predicting Species Occurrences** J. Michael Scott, Patricia Heglund, Michael L. Morrison, 2002-02

Predictions about where different species are where they are not and how they move across a landscape or respond to human activities if timber is harvested for instance or stream flow altered are important aspects of the work of wildlife biologists land managers and the agencies and policymakers that govern natural resources Despite the increased use and importance of model predictions these predictions are seldom tested and have unknown levels of accuracy Predicting Species Occurrences addresses those concerns highlighting for managers and researchers the strengths and weaknesses of current approaches as well as the magnitude of the research required to improve or test predictions of currently used models The book is an outgrowth of an international symposium held in October 1999 that brought together scientists and researchers at the forefront of efforts to process information about species at different spatial and temporal scales It is a comprehensive reference that offers an exhaustive treatment of the subject with 65 chapters by leading experts from around the world that review the history of the theory and practice of modeling and present a standard terminology examine temporal and spatial scales in terms of their influence on patterns and processes of species distribution offer detailed discussions of state of the art modeling tools and descriptions of methods for assessing model accuracy discuss how to predict species presence and abundance present examples of how spatially explicit data on demographics can provide important information for managers An introductory chapter by Michael A Huston examines the ecological context in which predictions of species occurrences are made and a concluding chapter by John A Wiens offers an insightful review and synthesis of the topics examined along with guidance for future directions and cautions regarding misuse of models Other contributors include Michael P Austin Barry R Noon Alan H Fielding Michael Goodchild Brian A Maurer John T Rotenberry Paul Angermeier Pierre R Vernier and more than a hundred others Predicting Species Occurrences offers important new information about many of the topics raised in the seminal volume Wildlife 2000 University of Wisconsin Press 1986 and will be the standard reference on this subject for years to come Its state of the art assessment will play a key role in guiding the continued development and application of tools for making accurate predictions and is an indispensable volume for anyone engaged in species management or conservation      Computerized Analysis of Mammographic Images for Detection and Characterization of Breast Cancer Paola Casti, Arianna Mencattini, Marcello Salmeri, Rangaraj M. Rangayyan, 2022-05-31 The identification and interpretation of the signs of breast cancer in mammographic images from screening programs can be very difficult due to the subtle and diversified appearance of breast disease This book presents new image processing and pattern recognition techniques for computer aided detection and diagnosis of breast cancer in its various forms The main goals are 1 the identification of bilateral asymmetry as an early sign of breast disease which is not detectable by other existing approaches and 2 the detection and classification of masses and regions of architectural distortion as benign lesions or malignant tumors in a unified framework that does not require accurate extraction of the contours of the lesions The innovative aspects of the

work include the design and validation of landmarking algorithms automatic Tumor masking procedures and various feature descriptors for quantification of similarity and for contour independent classification of mammographic lesions Characterization of breast tissue patterns is achieved by means of multidirectional Gabor filters For the classification tasks pattern recognition strategies including Fisher linear discriminant analysis Bayesian classifiers support vector machines and neural networks are applied using automatic selection of features and cross validation techniques Computer aided detection of bilateral asymmetry resulted in accuracy up to 0.94 with sensitivity and specificity of 1 and 0.88 respectively Computer aided diagnosis of automatically detected lesions provided sensitivity of detection of malignant tumors in the range of 0.70-0.81 at a range of falsely detected tumors of 0.82-3.47 per image The techniques presented in this work are effective in detecting and characterizing various mammographic signs of breast disease

**The Ecology of Large Mammals in Central Yellowstone** Robert A. Garrott, Patrick J. White, Fred G.R. Watson, 2008-11-25 This book is an authoritative work on the ecology of some of America's most iconic large mammals in a natural environment and of the interplay between climate landscape and animals in the interior of the world's first and most famous national park Central Yellowstone includes the range of one of the largest migratory populations of bison in North America as well as a unique elk herd that remains in the park year round These populations live in a varied landscape with seasonal and often extreme patterns of climate and food abundance The reintroduction of wolves into the park a decade ago resulted in scientific and public controversy about the effect of large predators on their prey a debate closely examined in the book Introductory chapters describe the geography geology and vegetation of the ecosystem The elk and bison are then introduced and their population ecology described both pre and post wolf introduction enabling valuable insights into the demographic and behavioral consequences for their ungulate prey Subsequent chapters describe the wildlife human interactions and show how scientific research can inform the debate and policy issues surrounding winter recreation in Yellowstone The book closes

with a discussion of how this ecological knowledge can be used to educate the public both about Yellowstone itself and about science ecology and the environment in general Yellowstone National Park exemplifies some of the currently most hotly debated and high profile ecological wildlife management and environmental policy issues and this book will have broad appeal not only to academic ecologists but also to natural resource students managers biologists policy makers administrators and the general public Unrivalled descriptions of ecological processes in a world famous ecosystem based on information from 16 years of painstaking field work and collaborations among 66 scientists and technical experts and 15 graduate studies Detailed studies of two charismatic North American herbivore species elk and bison Description of the restoration of wolves into central Yellowstone and their ecological interactions with their elk and bison prey Illustrated with numerous evocative colour photographs and stunning maps
