How to Get the Grade Without Doing the Work Charles Lanham, 2010-08-10 The one problem all students run into while they prepare for a test is not what you might think You might naturally assume that the problem is one of memory i.e. remembering the answers to the test but the real problem is what I call the Situation Effect In laymen terms our intelligence is composed of two halves the first being genetic the second being environmental e.g. diet, sleep, sociability etc. and these two halves come together to form our current situation Therefore effects on either of these halves can help make or break our grades The only way to improve your situation is to learn how to make your brain happy and comfortable because when you're sad or stressed you will not function as well In fact some people are physically disfigured to a certain degree because they endured so much trial In this state of mind motor skills are frustrated and do not function like they should Also because of provoking anxiety ability to fight disease is infringed Above all your focus, drive to succeed and mental activity are all incredibly bankrupt When they're bad enough it feels like they don't even exist Therefore if you keep yourself as happy as possible you will study more effectively

Teaching as the Art of Staging Anthony Weston, 2023-07-03 College teachers all too often still play Sage on the Stage lecturing to rooms full of passive and supposedly absorbed students The cutting edge opposite is still supposed to be the Guide on the Side facilitating wherever students themselves are already going mentoring and coaching them along the way But who says that these are the only or the best alternatives This book advances another and sharply different model the Impresario with a Scenario a teacher who serves as class mobilizer, improviser and energizer staging dramatic often

unexpected and self unfolding learning challenges and adventures with students In this book the author argues that to pose a single alternative to lecturing is profoundly limiting In fact he says there is no reason to have to choose between student centered and teacher centered pedagogies The best ways to teach and learn are both The same applies to the false choice between active students and active teachers there can be more than enough activity for everyone In particular the author argues that we need a model in which the teacher is notably pro active a kind of activity for which certain theatrical metaphors seem especially appropriate Picture a college teacher who regularly sets up classroom scenarios challenging problems unscripted dramas role plays simulations and the like such that the scenario itself frames and drives most of the action and learning that follows For teaching as staging the primary work of the teacher is staging such scenarios The basic goal is to put students into an urgently engaging and self unfolding scenario trusting them to carry it forward while being prepared to join in as needed This book offers a conceptual and practical framework for Teaching as Staging grounding the approach with illustrative and sometimes provocative narrative from the literature as well as the author s own practice Teaching as the Art of Staging offers a visionary challenge to the prevailing models of pedagogy The book presents a thoroughly practical model that opens up new possibilities for anyone interested in dramatic new directions in teaching and learning

Sikos,Paul Haskell-Dowland,2023-05-15 This book collects state of the art curriculum development considerations training methods techniques and best practices as well as cybersecurity lab requirements and aspects to take into account when setting up new labs all based on hands on experience in teaching cybersecurity in higher education In parallel with the increasing number and impact of cyberattacks there is a growing demand for cybersecurity courses in higher education More and more educational institutions offer cybersecurity courses which come with unique and constantly evolving challenges not known in other disciplines For example step by step guides may not work for some of the students if the configuration of a computing environment is not identical or similar enough to the one the workshop material is based on which can be a huge problem for blended and online delivery modes Using nested virtualization in a cloud infrastructure might not be authentic for all kinds of exercises because some of its characteristics can be vastly different from an enterprise network environment that would be the most important to demonstrate to students The availability of

cybersecurity datasets for training and educational purposes can be limited and the publicly available datasets might not suit a large share of training materials because they are often excessively documented but not only by authoritative websites which render these inappropriate for assignments and can be misleading for online students following training workshops and looking for online resources about datasets such as the Boss of the SOC BOTS datasets The constant changes of Kali Linux make it necessary to regularly update training materials because commands might not run the same way they did a couple of months ago The many challenges of cybersecurity education are further complicated by the continuous evolution of networking and cloud computing hardware and software which shapes student expectations what is acceptable and respected today might be obsolete or even laughable tomorrow
