Tropical Cool: A Buddhist Manual of Air Conditioning ,2018-02-03 A case can be made and has been made by Pope Francis that the extensive use of air conditioning use in the developed world especially the United States is a careless excess and poor example to the rest of the world Indeed it makes a mockery of the current ideology of energy sustainability including concerns about prevention of global warming Extension of wasteful practices of air conditioning to emerging economies like India is easily shown to be unsustainable As with other recalcitrant problems such as over reliance on cars and poor personal health and dietary habits smoking processed foods the source of the problem is found individual moral choices that are championed as individual freedoms but actually represent a degenerate morality which yields more benefit to corporations and big government than to people The Buddhist ethic provides one path into the heart of human choices illuminating as it does the incorrect thinking that underlies bad choices including those that most people think are based on common sense and scientific expertise This book applies this idea to the matter of air conditioning using Thailand and like Southeast Asian settings as an example It makes the claim that emerging western interest in mindfulness could be leveraged to introduce new thinking on personal energy use that will go much further to create true sustainability than programs based on harnessing geophysical technologies such as solar and wind

Energy Efficiency in Buildings José Manuel Andújar, Sergio Gómez Melgar, 2020-04-28 Buildings are one of the main causes of the emission of greenhouse gases in the world Europe alone is responsible for more than 30% of emissions or about 900 million tons of CO₂ per year Heating and air conditioning are the main cause of greenhouse gas emissions in buildings Most buildings currently in use were built with poor energy efficiency criteria or depending on the country and the date of construction none at all Therefore regardless of whether construction regulations are becoming stricter the real challenge nowadays is the energy rehabilitation of existing buildings It is currently a priority to reduce or ideally eliminate the waste of energy in buildings and at the same time supply

the necessary energy through renewable sources The first can be achieved by improving the architectural design construction methods and materials used as well as the efficiency of the facilities and systems the second can be achieved through the integration of renewable energy wind solar geothermal etc in buildings In any case regardless of whether the energy used is renewable or not the efficiency must always be taken into account The most profitable and clean energy is that which is not consumed

Computational Science and Its Applications – ICCSA 2016 Osvaldo Gervasi, Beniamino Murgante, Sanjay Misra, Ana Maria A.C. Rocha, Carmelo M. Torre, David Taniar, Bernady O. Intelligent Systems and Applications Yaxin Bi, Rahul Bhatia, Supriya Kapoor, 2019-08-23 The book presents a remarkable collection of chapters covering a wide range of topics in the areas of intelligent systems and artificial intelligence and their real world applications It gathers the proceedings of the Intelligent Systems Conference 2019 which attracted a total of 546 submissions from pioneering researchers scientists industrial engineers and students from all around the world These submissions underwent a double blind peer review process after which 190 were selected for inclusion in these proceedings As intelligent systems continue to replace and sometimes outperform human intelligence in decision making processes they have made it possible to tackle a host of problems more effectively This branching out of computational intelligence in several directions and use of intelligent systems in everyday applications have created the need for an international conference as a venue for reporting on the latest innovations and trends This book collects both theory and application based chapters on virtually all aspects of artificial intelligence presenting state of the art intelligent methods and techniques for solving real world problems along with a vision for future research it represents a unique and valuable asset

The Identity of the Architect Laura Iloniemi, 2019-12-23 Today there are more tools for communication than ever before yet very little in the way of reflection on how these are being used and even less on what exactly is being conveyed This issue of AD looks at how architecture is communicated from a cultural perspective Do the identities of practices or their business driven branding and promotional efforts resonate with the critical acclaim many architects seek Has slick image led media coverage sold the profession short How is it possible to convey the less visual and haptic qualities of architecture Can architects be more creative in their communication efforts making these joyous on their own terms as Le Corbusier did so memorably Is there really a need to succumb to the world of corporate marketing processes and managerial business jargon The issue explores notions of editing and curating work in an age of

data deluge and discusses social media as a genuinely alternative space for communication rather than for just repurposing and regurgitating information relayed. The Identity of the Architect encourages the promotion of practices as an integral extension of the very culture they hope to engender through their work. Contributors: Stephen Bayley, Caroline Cole, Adam Nathaniel Furman, Gabor Gallo, Jonathan Glancey, Justine Harvey, Owen Hopkins, Crispin Kelly, Jay Merrick, Robin Monotti, Juhani Pallasmaa, Vicky Richardson, Jenny Sabin, and Austin Williams. Featured architects: Ian Ritchie, BIG, MVRDV, IF_DO, and Zaha Hadid Architects.

Nuclear Non-proliferation and Arms Control Verification Irmgard Niemeyer, Mona Dreicer, Gotthard Stein, 2020-03-12. This book strives to take stock of current achievements and existing challenges in nuclear verification, identify the available information and gaps that can act as drivers for exploring new approaches to verification strategies and technologies. With the practical application of the systems concept to nuclear disarmament scenarios and other non-nuclear verification fields, it investigates where greater transparency and confidence could be achieved in pursuit of new national or international nonproliferation and arms reduction efforts. A final discussion looks at how, in the absence of formal government-to-government negotiations, experts can take practical steps to advance the technical development of these concepts.
