

A Day in the Life of a Climate Scientist

Lesson Design

Grade Level: 5-6

Subject Area: Earth Science

Lesson Topic (What is the “big idea?”): What standard(s) and/or IEP goal(s) will it address?

There are many different ways to gain accurate information about past climate and make sound predictions about future climate.

Climate Literacy Principles:

4c: Based on evidence from tree rings, other natural records, and scientific observations made around the world, Earth's average temperature is now warmer than it has been for at least the past 1,300 years.

5a: The components and processes of Earth's climate system are subject to the same physical laws as the rest of the universe.

5b: Environmental observations are the foundation for understanding the climate system.

Supporting Colorado Science Standards:

-Life Science 2.1: Changes in environmental conditions can affect the survival of individual organisms, populations, and entire species.

Related Colorado Math Standards: 5.2.2, 6.2.2, 7.2.1, 8.2.1

Main Objective of Instruction (What do you want the student(s) to learn?):

Students will be able to identify proxy versus observational data, and how they are both used in computer climate models.

Supporting Objectives:

Students will understand that there are many career paths that support scientific research.

Students will observe the unusual spike in temperature that has occurred since the industrial revolution.

Students will begin to predict that a human influence has caused that spike.

Specific Strategies to be taught/modelled:

-using geometry to create simple graph paper

-graphing data

-interpreting graphs

-following lab directions

-precise measurement and recording

Planning for individual differences (mediated scaffolding): What are the accommodations/modifications you need to prepare?

Students' background knowledge will vary greatly. Most parts of the lesson provide opportunities for students to participate at their level. For group activities, groups will be mixed levels.

Students will receive behavioral and academic support from para-educators.

What background knowledge do the students have/need?

- basic numeracy skills to understand relative values of temperature measurements.

- an understanding of graphic representation of data in order to understand graphs.

secondary school contexts research exploring best practice assessment in geography is rare This is a concern given the distinctive nature of geography and the important role of assessment in the learning process This scholarly collection seeks to address this issue by connecting research in educational assessment with the domain of geography The chapters are written by leading researchers in Geographical Education from across the globe These chapters provide examples of innovation through the collective voices of geography teacher educator scholars from across Australia USA South Korea Germany Switzerland and Singapore What unifies the work in this book is that each chapter focuses on a key feature of the discipline of geography providing scholarly examples of evidence based practices for assessing student s knowledge and skills
