C630 Nickel/Bronze

We choose to use the copper based C63000 nickel-aluminum bronze as a material to make our bronze valve guides, because of its ideal characteristics for the application. The 5% nickel content provides superior resistance to wear, and the approximately 80% copper content delivers outstanding heat conductivity. KPMI® guide profiles are designed to have minimal effect on the airstream, while maintaining critical cross sectional thickness in high temperature areas, which promotes high performance and endurance.

Cast Iron

After chemically separating several samples of cast iron material, and analyzing and evaluating the test data, we decided to have our own specification of cast iron made exclusively for us. We specify elements such as carbon, silicon, manganese, nickel, chromium, copper and sulfur to produce a highly pearlitic structure with dense fine grains, and excellent wear resistance.

Manganese

These Engine Builder valve guides have been designed with the price conscious builder in mind. Expect the same exacting KPMI® tolerances, but with a reduced toughness/wear-ability when compared to premium "C630" nickel-aluminum bronze valve guides. The softer Manganese guides are easily reamed, and then can be delicately finished with our high quality ball hones. Now, with any battery operated or electric drill, you can ream and hone manganese valve guides in less time, and in the absence of expensive honing equipment required to properly size "tough" Nickel Bronze guides.

Superior Airflow

Guide profiles are designed to have as little effect on the airstream as possible, while maintaining critical cross sectional thickness in high temperature areas, promoting both high performance and endurance.

Tight Tolerances

High concentricity tolerances are held to insure that the best possible geometry between the seat and guide is maintained when the guides are replaced. This means minimal material removal from the seat, time savings, and consistent chamber volumes, when valve jobs are performed.
