sp are examined and compared with those of Carcharhinus Blainville Features studied include morphometrics vertebral
numbers and other vertebral characteristics tooth numbers color pattern and some other aspects of external morphology It is
concluded that on these features C Leiodon n sp is entirely encompassed within the parameters of Carcharhinus and that
although A isodon H hemiodon H macloti and H signatus each extend the range of diversity of Carcharhinus in one or more
features A isodon is not uniquely different from Carcharhinus and there is no common pattern of difference between the

three species of Hypoprion and Carcharhinus Accordingly and because the nature of the teeth of Aprionodon and Hypoprion has been found insufficient to warrant generic distinction from Carcharhinus the genera Aprionodon and Hypoprion are synonymised with Carcharhinus A diagnosis and description are given for each of the above species The descriptions include measurements counts and line illustrations that show the whole shark in lateral view underside of head nostril and teeth The geographic distribution is summarized as are also the meager biological data available on number of embryos size at birth size at sexual maturity and maximum size *Health Devices Sourcebook* ,1994 Most complete directory of devices specifically related to the delivery of health care Entries in the product section give address and telephone number Contains listings of trade names and manufacturers **Foreign Animal Disease Reference Manual** D.
