Handbook of Road Ecology Rodney van der Ree,Daniel J. Smith,Clara Grilo,2015-06-15 Winner of the IENE Project Award 2016 This

authoritative volume brings together some of the world's leading researchers, academics, practitioners, and transportation agency personnel to present the current status of the ecological sustainability of the linear infrastructure, primarily road, rail, and utility easements that dissect and fragment landscapes globally. It outlines the potential impacts, demonstrates how this infrastructure is being improved, and how broad ecological principles are applied to mitigate the impact of road networks on wildlife. Research and monitoring is an important aspect of road ecology encompassing all phases of a transportation project. This book covers research and monitoring to span the entire project continuum starting with planning and design through construction and into maintenance and management. It focuses on impacts and solutions for species groups and specific regions with particular emphasis on the unique challenges facing Asia, South America, and Africa. Other key features:

- Contributions from authors originating from over 25 countries including from all continents.
- Each chapter summarizes important lessons and includes lists of further reading and thoroughly up-to-date references.
- Highlights principles that address key points relevant to all phases in all road projects.
- Explains best practices based on a number of successful international case studies.
- Chapters are stand-alone but they also build upon and complement each other.
- Extensive cross-referencing directs the reader to relevant material elsewhere in the book.

Handbook of Road Ecology offers a comprehensive summary of approximately 30 years of global efforts to quantify the impacts of roads and traffic and implement effective mitigation. As such, it is essential reading for those involved in the planning, design, assessment, and construction of new roads, the management and maintenance of existing roads, and the modifying or retrofitting of existing roads and problem locations. This handbook is an accessible resource for both developed and developing countries, including government transportation agencies, government environmental conservation agencies, NGOs, and road funding and donor organisations.
