Why Are Mathematicians Like Airlines:

My Mathematical Universe: People, Personalities, And The Profession Krishnaswami Alladi, 2022-11-15 This is an autobiography and an exposition on the contributions and personalities of many of the leading researchers in mathematics and physics with whom Dr Krishna Alladi Professor of Mathematics at the University of Florida has had personal interaction with for over six decades Discussions of various aspects of the physics and mathematics academic professions are included Part I begins with the author's unusual and frequent introductions as a young boy to scientific luminaries like Nobel Laureates Niels Bohr Murray Gell Mann and Richard Feynman in the company of his father the scientist Alladi Ramakrishnan Also in Part I is an exciting account of how the author started his research investigations in number theory as an undergraduate and how contact and collaboration with the great Paul Erdős as a student influenced him in his career In depth views of the Institute for Advanced Study Princeton and several major American Universities are given and fascinating descriptions of the work and personalities of some Field Medalists and eminent mathematicians are provided Part II deals with the author's tenure at the University of Florida where he initiated several programs as Mathematics Chair for a decade and how he has served the profession in various capacities most notably as Chair of the SASTRA Ramanujan Prize Committee and Editor in Chief of The Ramanujan Journal The book would appeal to academicians and the general public since the author has blended academic and scientific discussions at a non technical level with descriptions of destinations in his international travels for work and pleasure The reader is invited to dig as deep as desired and is guaranteed to be treated to whimsical stories and personal peeks at some of the great luminaries of the twentieth and twenty first centuries

Mathematics of Planet Earth Hans Kaper, Christiane Rousseau, 2015-03-31 Our planet faces many challenges In 2013 an international partnership of more than 140 scientific societies research institutes and organizations focused its attention on these challenges This project was called Mathematics of Planet Earth and featured English and French language blogs accessible to nonmathematicians as part of its outreach activities This book is based on more than 100 of the 270 English language blog posts and focuses on four major themes A Planet to Discover A Planet Supporting Life A Planet Organized by Humans and A Planet at Risk Readers will learn about the challenges that confront the Earth today and how mathematics and mathematicians contribute to a better understanding of some of these challenges *A Mathematical Medley* George Szpiro, 2010 Describes in layman's terms mathematical problems that have recently been solved or thought to have been solved research that has been published in scientific journals and mathematical observations about contemporary life Anecdotal stories about the lives of mathematicians and stories about famous old problems are interspersed among other vignettes

The Calculus Collection Caren L. Diefenderfer, Roger B. Nelsen, 2010-12-31 The Calculus Collection is a useful resource for everyone who teaches calculus in high school or in a 2 or 4 year college or university It consists of 123 articles selected by a panel of six veteran high school teachers each of which was originally published in Math Horizons MAA

Focus The American Mathematical Monthly The College Mathematics Journal or Mathematics Magazine The articles focus on engaging students who are meeting the core ideas of calculus for the first time The Calculus Collection is filled with insights alternate explanations of difficult ideas and suggestions for how to take a standard problem and open it up to the rich mathematical explorations available when you encourage students to dig a little deeper Some of the articles reflect an enthusiasm for bringing calculators and computers into the classroom while others consciously address themes from the calculus reform movement But most of the articles are simply interesting and timeless explorations of the mathematics encountered in a first course in calculus

improvement of technological processes and products What is happening already Where are the deficits What can we expect for the future 19 articles written by mixed teams of authors of engineering industry and mathematics offer a fascinating insight of the interaction between mathematics and engineering Stormy Skies Paul Clark,2016-04-01 As the airline industry struggles to extricate itself from its latest crisis the time has come to examine the fundamentals of airline business strategy in a more innovative way and find answers to the questions What went wrong and Why didn't we see it coming Stormy Skies captures the key issues that determine a viable airline industry in an increasingly globalised world and calls for more radical business thinking to ensure that mistakes are avoided in future It looks at the airline business through the eyes of both the airlines themselves and also their customers drawing upon the experience and views of industry personalities

The Problem with Software Adam Barr,2018-10-23 An industry insider explains why there is so much bad software and why academia doesn't teach programmers what industry wants them to know Why is software so prone to bugs So vulnerable to viruses Why are software products so often delayed or even canceled Is software development really hard or are software developers just not that good at it In *The Problem with Software* Adam Barr examines the proliferation of bad software explains what causes it and offers some suggestions on how to improve the situation For one thing Barr points out academia doesn't teach programmers what they actually need to know to do their jobs how to work in a team to create code that works reliably and can be maintained by somebody other than the original authors As the size and complexity of commercial software have grown the gap between academic computer science and industry has widened It's an open secret that there is little engineering in software engineering which continues to rely not on codified scientific knowledge but on intuition and experience Barr who worked as a programmer for more than twenty years describes how the industry has evolved from the era of mainframes and Fortran to today's embrace of the cloud He explains bugs and why software has so many of them and why today's interconnected computers offer fertile ground for viruses and worms The difference between good and bad software can be a single line of code and Barr includes code to illustrate the consequences of seemingly inconsequential choices by programmers Looking to the future Barr writes that the best prospect for improving software engineering is the move to the cloud When software is a service and not a product companies will have more incentive to make it good rather than good enough to ship Math: a Crash Course Brian/Morris Peet Clegg,Peet Morris,2019-07-30 It's a sad truth that math has the reputation of being difficult Part of the problem is that many of us simply don't speak the language To a mathematician an equation is a compact efficient way to put across a relationship that would be far less comprehensible in words But to many of us the merest sign of an x y or symbol is an impenetrable mess that our eyes bounce off This book provides an engaging overview of what math is and what it can do without having to solve simultaneous equations or prove geometric theorems far more of us might get the point of it It is divided into four chapters each covering a major developmental route in the topic from Arithmetic Numbers to Geometry and from Algebra Calculus to Applied Mathematics
