Generalized Perturbations in Modified Gravity and Dark Energy Jonathan Pearson,2013-09-20 When predictions of Einstein s theory of General Relativity are compared against observations of our Universe a huge inconsistency is found The most popular fix for this inconsistency is to invent around 94% of the content of the universe dark matter and dark energy The dark energy is some exotic substance responsible for the apparent observed acceleration of the Universe Another fix is to modify the theory of gravity it is entirely plausible that Einstein s theory of General Relativity breaks down on cosmological scales just as Newton s theory of gravity breaks down in the extreme gravitational field of the Sun There are many alternative theories of gravity each with the aim of describing observations of our Universe where General Relativity fails Whether it is dark energy or some modified theory of gravity it is clear that there is some dark sector in the Universe In this thesis the author constructs a unifying framework for understanding the observational impact of general classes of dark sector theories by formulating equations of state for the dark sector perturbations Medical Imaging Physics William R.
