## Ch 4: Skin & Body Membranes Study Guide

Lisa Peck

Body membranes, which cover surfaces, line body cavities, and form protective (and often lubricating) sheets around organs, fall into two major groups. There are (1) **epithelial membranes**, which include the cutaneous, mucous, and serous membranes, and (2) **connective tissue membranes**, represented by synovial membranes.

The cutaneous membrane, generally called the skin or integumentary system, will receive most of our attention in this chapter, but first we will consider the other body membranes.

### Objective Checklist

#### Classification of Body Membranes

- List the general functions of each membrane type-cutaneous, mucous, serous, and synovial-and give its location in the body.
- Compare the structure (tissue makeup) of the major membrane types.

#### Integumentary System (Skin)

- List several important functions of the integumentary system and explain how these functions are accomplished.
- When provided with a model or diagram of the skin, recognize and name the following skin structures: epidermis, dermis (papillary and reticular layers), hair and hair follicle, sebaceous gland, and sweat gland.
