The many advancements and branches of mathematics were developed through the centuries as people encountered problems and relied upon math to solve them. It's amazing how ten simple digits can be used in an endless number of ways to benefit man. The development of these ten digits and their many uses is the fascinating story in *Exploring the World of Mathematics*. Physics is a branch of science that many people consider to be too complicated to understand. John Hudson Tiner puts this myth to rest as he explains the fascinating world of physics in a way that students can comprehend. Did you know that a feather and a lump of lead will fall at the same rate in a vacuum? Learn about the history of physics from Aristotle to Galileo to Isaac Newton to the latest advances. Discover how the laws of motion and gravity affect everything from the normal activities of everyday life to launching rockets into space. Learn about the effects of inertia first hand during fun and informative experiments. *Exploring the World of Physics* is a great tool for student who want to have a deeper understanding of the important and interesting ways that physics affects our lives.

*Semester 2 Biology and Chemistry*. The field of biology focuses on living things from the smallest microscopic protozoa to the largest mammal. In this book you will read and explore the life of plants, insects, spiders and other arachnids, life in water, reptiles, birds and mammals, highlighting God's amazing creation. You will learn about biological classification, how seeds spread around the world, long term storage of energy, how biologists learned how the stomach digested food, the plant that gave George de Mestral the idea of Velcro and so much more. For most of history biologists used the visible appearance of plants or animals to classify them. They grouped plants or animals with similar looking features into families. Starting in the 1990's biologists have extracted DNA and RNA from cells as a guide to how plants or animals should be grouped. Like visual structures, these reveal the underlying design of creation. *Exploring the World of Biology* is a fascinating look at life from the smallest proteins and spores to the complex life systems of humans and animals.

Chemistry is an amazing branch of science that affects us every day yet few people realize it or even give it much thought. Without chemistry there would be nothing made of plastic, there would be no rubber tires, no tin cans, no televisions, no microwave ovens or something as simple as wax paper. This book presents an exciting and intriguing tour through the realm of chemistry as each chapter unfolds with facts and stories about the discoveries of discoverers. Find out why pure gold is not used for jewelry or coins. Join Humphry Davy as he made many chemical discoveries and learn how they shortened his life. See how people in the 1870s could jump over the top of the Washington Monument. *Exploring the World of Chemistry* brings science to life and is a wonderful learning tool with many illustrations and biographical information.

*Urban Classroom Portraits* Mary E. Bredemeier, 1988 *Urban Classroom Portraits* begins with a summary of the research on effective schools and classrooms and outlines a theory for urban education. Seventeen profiles of successful urban teachers follow based on observations and interviews; these often let the teachers speak for themselves. The last chapter considers the range of skills and personal qualities which enable some teachers to be successful against the odds.

*Extra Credit* Andrew Clements, 2012-03-13 It isn't that Abby Carson can't do her schoolwork. She just doesn't like doing it. And in

February a warning letter arrives at her home Abby will have to repeat sixth grade unless she meets some specific conditions including taking on an extra credit project to find a pen pal in a distant country Seems simple enough But when Abby s first letter arrives at a small school in Afghanistan the village elders agree that any letters going back to America must be written well In English And the only qualified student is a boy Sadeed Bayat Except in this village it is not proper for a boy to correspond with a girl So Sadeed s younger sister will write the letters Except she knows hardly any English So Sadeed must write the letters For his sister to sign But what about the villagers who believe that girls should not be anywhere near a school And what about those who believe that any contact with Americans is unhealthy Not so simple But as letters flow back and forth between the prairies of Illinois and the mountains of central Asia across cultural and religious divides through the minefields of different lifestyles and traditions a small group of children begin to speak and listen to one another And in just a few short weeks they make important discoveries about their communities about their world and most of all about themselves
