

Chapter 9

Hypothesis Tests About the Mean and Proportion

Section 9.1

- 9.1
- The **null hypothesis** is a claim about a population parameter that is assumed to be true until it is declared false.
 - An **alternative hypothesis** is a claim about a population parameter that will be true if the null hypothesis is false.
 - The **critical point(s)** divide(s) the whole area under a distribution curve into rejection and nonrejection regions.
 - The **significance level**, denoted by α , is the probability of making a Type I error, that is, the probability of rejecting the null hypothesis when it is actually true.
 - The **nonrejection region** is the area to the right or left of the critical point where the null hypothesis is not rejected.
 - The **rejection region** is the area to the right or left of the critical point where the null hypothesis is rejected.
 - A hypothesis test is a **two-tailed test** if the rejection regions are in both tails of the distribution curve; it is a **left-tailed test** if the rejection region is in the left tail; and it is a **right-tailed test** if the rejection region is in the right tail.
 - A **Type I error** occurs when a true null hypothesis is rejected. The probability of committing a Type I error is $\alpha = P(H_0 \text{ is rejected} \mid H_0 \text{ is true})$. A **Type II error** occurs when a false null hypothesis is not rejected. The probability of committing a Type II error is $\beta = P(H_0 \text{ is not rejected} \mid H_0 \text{ is false})$.
- 9.3 A hypothesis test is a two-tailed test if the sign in the alternative hypothesis is " \neq "; it is a left-tailed test if the sign in the alternative hypothesis is " $<$ "; and it is a right-tailed test if the sign in the alternative hypothesis is " $>$ ". Table 9.3 in the text describes these relationships.
- 9.5 The null hypothesis is initially assumed to be true.
- 9.7
- $H_0: \mu = 20$ hours, $H_1: \mu \neq 20$ hours, two-tailed test
 - $H_0: \mu = 10$ hours, $H_1: \mu > 10$ hours, right-tailed test
 - $H_0: \mu = 3$ years, $H_1: \mu \neq 3$ years, two-tailed test
 - $H_0: \mu = \$1000$, $H_1: \mu < \$1000$, left-tailed test
 - $H_0: \mu = 12$ minutes, $H_1: \mu > 12$ min, right-tailed test

Essentials of Modern Materials Science and Engineering James A. Newell, 2008-12-15 This book begins with four fundamental tenants The properties of a material are determined by its structure Processing can alter that structure in specific and predictable ways The behavior of materials is grounded in science and is understandable The properties of all materials change over time with use and exposure to environmental conditions When selecting a material sufficient and appropriate testing must be performed to insure that the material will remain suitable throughout the reasonable life of the product This text assumes that the students are at least sophomores so that they are familiar with basic chemical bonding and the periodic table But it is an introductory materials course so there will be no differential equations percolation theory quantum mechanics statistical thermodynamics or other advanced topics The book is designed as an introduction to the field not a comprehensive guide to all materials science knowledge Instead of going into great detail in many areas the book provides key concepts and fundamentals students need to understand materials science and make informed decisions An example of the philosophy is found in the materials testing section Although countless variations exist in testing techniques the chapter focuses on operating principles and the property to be measured rather than confusing the student with exposition on variations and exceptions That material is beyond the scope of most introductory courses
