**Face-balanced, Venn and PolyVenn Diagrams** Bette Bultena, University of Victoria (B.C.). Dept. of Computer Science, 2013 A simple  $n$  Venn diagram is a collection of  $n$  simple intersecting closed curves in the plane where exactly two curves meet at any intersection point the curves divide the plane into  $2n$  distinct open regions each defined by its intersection of the interior or exterior of each of the curves A Venn diagram is reducible if there is a curve that when removed leaves a Venn diagram with one less curve and irreducible if no such curve exists A Venn diagram is extendible if another curve can be added producing a Venn diagram with one more curve Currently it is not known whether every simple Venn diagram is extendible by the addition of another curve We show that all simple Venn diagrams with 5 curves or less are extendible to another simple Venn diagram We also show that for certain Venn diagrams a new extending curve is relatively easy to produce We define a new type of diagram of simple closed curves where each curve divides the plane into an equal number of regions we call such a diagram a face balanced diagram We generate and exhibit all face balanced diagrams up to and including those with 32 regions these include all the Venn diagrams Venn diagrams exist where the curves are the perimeters of polyominoes drawn on the integer lattice

**Venn Diagram Courseware for Interdisciplinary Education** Marybeth Bauer, 2000

**Searching for Simple Symmetric Venn Diagrams** Abdolkhalegh Ahmadi Mamakani, University of Victoria (B.C.). Department of Computer Science, 2013 An  $n$  Venn diagram is defined as a collection of  $n$  finitely intersecting closed curves dividing the plane into  $2n$  distinct regions where each region is in the interior of a unique subset of the curves A Venn diagram is simple if at most two curves intersect at any point and it is monotone if it has some embedding on the plane in which all curves are convex An  $n$  Venn diagram has  $n$  fold rotational symmetry if a rotation of 180 degrees about a centre point in the plane leaves the diagram unchanged up to a

relabeling of the curves It has been known that rotationally symmetric Venn diagrams could exist only if the number of curves is prime Moreover non simple Venn diagrams with rotational symmetry have been proven to exist for any prime number of curves However the largest prime for which a simple rotationally symmetric Venn diagram was known prior to this was 7 In this thesis we are concerned with generating simple monotone Venn diagrams especially those that have some type s of symmetry Several representations of these diagrams are introduced and different backtracking search algorithms are provided based on these representations Using these algorithms we show that there are 39 020 non isomorphic simple monotone 6 Venn diagrams in total In the case of drawing Venn diagrams on a sphere we prove that there exists a simple symmetric  $n$  Venn diagram for any  $n \geq 6$  with the following set s of isometries a a 4 fold rotational symmetry about the polar axis together with an additional involutonal symmetry about an axis through the equator or b an involutonal symmetry about the polar axis together with two reflectionalsymmetries about orthogonal planes that intersect at the polar axis Finally we introduce a new type of symmetry of Venn diagrams which leads us to the discovery of the first simple rotationally symmetric Venn diagrams of 11 and 13 curves

*I Love Fennec Foxes: Journal for Fennec Fox Lovers* Fennec Fox Journal,2019-03-28 A Journal for people who love Fennec Foxes Perfect for keeping track of all the things for your Fox and any other personal stuff 9 inches x 6 inches 110 lined pages
