Unraveling inflammaging : A pathway to Prevent Age-related Disease in Animals Toshiro Arai, Takahiro Teshima, Osamu Yamato, Jose Ceron, 2025-01-13 The field of age related diseases in animals particularly focusing on the concept of inflammaging forms the basis of this research topic Inflammaging a term coined to describe the chronic proinflammatory state often associated with aging has been linked to a variety of degenerative diseases This low grade chronic inflammatory state is believed to result from an accumulation of damaged macromolecules and cellular debris due to increased production and inhibited damage surveillance and repair functions in multiple tissues The secretion of proinflammatory cytokines from senescent cells known as the senescence associated secretory phenotype SASP is thought to contribute to the onset of inflammaging In animals such as dogs and cats the longer they live the more diseases they develop similar to humans with

inflammaging being a potential cause of various age related diseases The primary aim of this research topic is to delve deeper into the mechanisms of inflammaging in animals and its role in age related diseases The goal is to develop new diagnostic biomarkers for inflammaging which could potentially lead to early diagnosis and prevention of age related diseases In an aging society the increase in age related diseases is inevitable However the extension of healthy life years and the ability to stay healthy until old age are standard medical requirements Therefore the early diagnosis of inflammaging could be a significant step towards preventing various age related diseases in animals
