Neurocinema Eelco F. M. Wijdicks, 2014-11-06 Film directors recognize that neurologic disease impacts mind and motility and often use it in a plot or defining scene It should be informative and educational to deconstruct neurologic representation in film Neurocinema When Film Meets Neurology is a collection of film essays that summarize the portrayal of major neurologic syndromes and Neuroscience and Art Amy Ione, 2024-08-27 This book is focused on how understanding ourselves as humans is incomplete without considering both biological and cultural aspects Using the neurocultural perspective the book explores how everything in the world is filtered back and forth through the brain and culture The thrust of the book therefore is to explore the power of art in creating a bridge between cultural and neuroscientific lines of inquiry Looking at both clinical and non clinical populations the text examines historical foundations distinguishes congenital developmental conditions from those that are acquired and emphasizes how the brain constructs our sensory experiences Several distinctive features separate this research from other publications First the book opens with a review of how the historical literature is still etched into the ideas we employ to explain elements across the interdisciplinary fields of art aesthetics our sensory experience psychology cognition and well being Second the research adopts a humanistic rather than a philosophical or social science perspective in demonstrating the value of coupling anatomy and physiology with the natural and social environment In this artists from all genres are

incorporated Among them are Iris Murdoch Ludwig van Beethoven Leonardo da Vinci Cristoforo de Predis Rembrandt Federico Fellini Chuck Close and David Hockney Case studies demonstrate how neuroscientific research meshes with art individual and cultural variables in ways that range from health and well being to physiological decline and biological traumas These include a case study that examines how Oliver Sacks combined biology and biography in his writings It also explores art projects in several genres inspired by his studies Another case study is on the role of film as a useful clinical tool Here the book also demonstrates that cinematic devices used by filmmakers intersect with perceptual and cognitive neuroscience A defining feature of the analysis is the integration of research on brain injuries with humanistic responses in film literature and the visual arts This section outlines the lack of consensus regarding the causes and treatment of shell shock in World War I before introducing how research and art now work with PTSD TBI Finally the book examines therapeutic cases of professional and non professional artists concluding with a discussion of synesthesia and the senses

Il corpo nello spettro Lorenzo Donghi, Deborah Toschi, 2024-06-28 T00:00:00+02:00 Nel contemporaneo il visuale si delinea sempre più come un orizzonte in continua espansione anche grazie al costante proliferare di nuovi device e avanzate tecniche di imaging. Comprendere come si articola il processo di costruzione culturale della visione sia in riferimento alle tecnologie impiegate sia in merito alla ricezione e all'interpretazione delle immagini prodotte divenuto così un obiettivo di ricerca cruciale nel campo delle teorie visuali. Il presente studio si muove in questa direzione adottando uno sguardo inedito e dedicando attenzione a quei processi di reificazione dell'immaginario medico scientifico che sostituiscono le tradizionali forme della visione ottica con nuove forme di visualizzazione postottica del corpo. La struttura del volume consta di un'introduzione generale e di quattro capitoli dedicati ad altrettante configurazioni di medical imaging somatico ottenibili in bande di spettro elettromagnetico e acustico estranee alla luce visibile.

Erwartungen: Sie entstehen aus dem Vorwissen der Zuschauer:innen und aus der Struktur der Texte. 3. Erfahrungen: Sie sind das Ergebnis der kognitiven und emotionalen Aneignung der Werke durch die Zuschauer:innen. Wirkungsvoll werden neue Vorstellungsbilder von geistiger Behinderung angebahnt durch eine Verstärkung und Bewusstmachung versteckter Vorurteile und das Angebot alternativer Bilder also neuer Erfahrungsmöglichkeiten von Behinderung. Die Werke müssen ästhetisch berzeugen die Partizipationsmöglichkeiten der Darsteller:innen erweitern und von einem allgemeinen Vorstellungsbild von Behinderung zu einem individuellen Vorstellungsbild von einem Menschen mit Behinderung führen. Die Aufgabe der Theater- und Filmanalyse wiederum liegt im Herausarbeiten von Lesarten die neue Erfahrungen mit geistiger Behinderung erleichtern.
