Ames, A.J. Hoff,2006-04-11 Progress in photosynthesis research is strongly dependent on instrumentation It is therefore not surprising that the impressive advances that have been made in recent decades are paralleled by equally impressive advances in sensitivity and sophistication of physical equipment and methods This trend started already shortly after the war in work by pioneers like Lou Duysens the late Stacy French Britton Chance Horst Witt George Feher and others but it really gained momentum in the seventies and especially the eighties when pulsed lasers pulsed EPR spectrometers and solid state electronics acquired a more and more prominent role on the scene of scientific research This book is different from most others because it focuses on the techniques rather than on the scientific questions involved Its purpose is three fold and this purpose is reflected in each chapter i to give the reader sufficient insight in the basic principles of a method to understand its applications ii to give information on the practical aspects of the method and iii to discuss some of the results obtained in photosynthesis research in order to provide insight in its potentialities We hope that in this way the reader will obtain sufficient information for a critical assessment of the relevant literature and perhaps more important will gain inspiration to tackle problems in his own field of research The book is not intended to give a comprehensive review of photosynthesis but nevertheless offers various views on the exciting developments that are going on **Nuclear Data Sheets** ,
