Oreovicz, 2015-01-15 The majority of professors have never had a formal course in education and the most common method for learning how to teach is on the job training This represents a challenge for disciplines with ever more complex subject matter and a lost opportunity when new active learning approaches to education are yielding dramatic improvements in student learning and retention This book aims to cover all aspects of teaching engineering and other technical subjects It presents both practical matters and educational theories in a format useful for both new and experienced teachers It is organized to start with specific practical teaching applications and then leads to psychological and educational theories The practical orientation section explains how to develop objectives and then use them to enhance student learning and the theoretical orientation section discusses the theoretical basis for learning teaching and its impact on students Written mainly for PhD students and professors in all areas of engineering the book may be used as a text for graduate level classes and professional workshops or by professionals who wish to read it on their own Although the focus is engineering education most of this book will be useful to teachers in other disciplines Teaching is a complex human activity so it is impossible to develop a formula that guarantees it will be excellent However the methods in this book will help all professors become good teachers while spending less time preparing for the classroom This is a new edition of the well received volume published by McGraw Hill in 1993 It includes an entirely revised section on the Accreditation Board for Engineering and Technology ABET and new sections on the characteristics of great teachers different active learning methods the application of technology in the classroom from clickers to intelligent tutorial systems and how people learn *Spreadsheet Tools for Engineers* Byron S. Gottfried, 1996 This text is aimed at teaching beginning engineers the use of spreadsheets and computational software Targeted at introductory Excel courses it explains mathematical procedures as well as presenting a variety of engineering applications **Excel for Scientists and Engineers** E. Joseph Billo, 2007-04-06 Learn to fully harness the power of Microsoft Excel r to perform scientific and engineering calculations With this text as your guide you can significantly enhance Microsoft Excel s r capabilities to execute the calculations needed to solve a variety of chemical biochemical

physical engineering biological and medicinal problems The text begins with two chapters that introduce you to Excel s Visual Basic for Applications VBA programming language which allows you to expand Excel s r capabilities although you can still use the text without learning VBA Following the author s step by step instructions here are just a few of the calculations you learn to perform Use worksheet functions to work with matrices Find roots of equations and solve systems of simultaneous equations Solve ordinary differential equations and partial differential equations Perform linear and non linear regression Use random numbers and the Monte Carlo method This text is loaded with examples ranging from very basic to highly sophisticated solutions More than 100 end of chapter problems help you test and put your knowledge to practice solving real world problems Answers and explanatory notes for most of the problems are provided in an appendix The CD ROM that accompanies this text provides several useful features All the spreadsheets charts and VBA code needed to perform the examples from the text Solutions to most of the end of chapter problems An add in workbook with more than twenty custom functions This text does not require any background in programming so it is suitable for both undergraduate and graduate courses Moreover practitioners in science and engineering will find that this guide saves hours of time by enabling them to perform most of their calculations with one familiar spreadsheet package **Applied Numerical**
