

Supercharge your finance workforce

4. SCALABLE AND FLEXIBLE

Legacy tools like spreadsheets are limited in the compute power of a desktop machine, which can prevent analysts from getting data insights quickly and effectively, especially if working with large datasets. Modern analytics solutions can take advantage of on-demand cloud computing to process huge datasets quickly without limitations on size or data format.

5. EMPOWERED ALL BUSINESS USERS

Automation is traditionally accomplished through coding, using SQL or Python. While this is a viable approach to data jobs, and automation, there aren't enough developers or coders to meet the demand for data, and they lack the business domain expertise to know what needs to be answered and for what problem. That's why most business users resort to the comfort of the spreadsheet.

Automated analytics solutions, on the other hand, are often no-code and self-service, allowing finance professionals to run and modify their own queries and reports, regardless of skill level. The democratization of analytics insights and reporting allows companies to leverage the collective wisdom of the broader organization and achieve better outcomes faster.

"The fact that I could process over 4.5 million rows of data from separate data sets without writing a single line of code was just incredible."
