

ACTIVITY 20

continued

My Notes

Lesson 20-1 Pythagorean Theorem

- The corresponding sides of similar triangles are proportional, so you can write proportions involving sides of the triangles from Item 2. Complete each proportion. Then find the cross products.

$$\frac{b}{a} = \frac{\boxed{}}{b}$$

$$\frac{a}{\boxed{}} = \frac{c}{a}$$

- Use the equations from Item 3 and algebra to prove $a^2 + b^2 = c^2$.

$$\begin{aligned} 3^2 + 4^2 & \stackrel{?}{=} 6^2 \\ 9 + 16 & \stackrel{?}{=} 36 \\ 25 & \neq 36 \end{aligned}$$

Check Your Understanding

- Pythagorean triple** is a set of three nonzero whole numbers that satisfy the Pythagorean Theorem. Explain why the numbers 3, 4, and 6 do not form a Pythagorean triple.
- Explain why the Pythagorean Theorem relationship, $a^2 + b^2 = c^2$, is only true if c is greater than both a and b .

The Sacred Geometry Oracle John Michael Greer, 2021-11-30 The cosmic patterns and universal truths of sacred geometry bridge past and future Now you can put this ancient wisdom to work in your own life with The Sacred Geometry Oracle The Sacred Geometry Oracle contains thirty three cards each representing a basic figure or process in sacred geometry and relating to one of the basic patterns of the universe which form the hidden structure of our everyday lives The accompanying 268 page book presents in detail the meanings of each of the thirty three cards and explores their esoteric philosophy and how the cards can be used for divination meditation and self exploration The card set also comes with textbook introducing and guiding users through the deck

Shapes of Time Michael McGillen, 2023-12-15 Shapes of Time explores how concepts of time and history were spatialized in early twentieth century German thought Michael McGillen locates efforts in German modernism to conceive of alternative shapes of time beyond those of historicism and nineteenth century philosophies of history at the boundary between secular and theological discourses By analyzing canonical works of German modernism those of Karl Barth Franz Rosenzweig Siegfried Kracauer and Robert Musil he identifies the ways in which spatial imagery and metaphors were employed to both separate the end of history from a narrative framework and to map the liminal relation between history and eschatology Drawing on theories and practices as disparate as constructivism non Euclidean geometry photography and urban architecture Shapes of Time presents original connections between modernism theology and mathematics as played out within the canon of twentieth century German letters Concepts of temporal and spatial form McGillen contends contribute to the understanding not only of modernist literature but also of

Handbook Anthony Gardiner, 1997 Mathematical Olympiad competitions started in Hungary at the end of the nineteenth century and are now held internationally. They bring together able secondary school pupils who attempt to solve problems which develop their mathematical skills. Olympiad problems are unpredictable and have no obvious starting point and although they require only the skills learnt in ordinary school problems they can seem much harder. The Mathematical Olympiad Handbook introduces readers to these challenging problems and aims to convince them that Olympiads are not just for a select minority. The book contains problems from the first 32 British Mathematical Olympiad BMO papers 1965-96 and gives hints and outline solutions to each problem from 1975 onwards. An overview is given of the basic mathematical skills needed and a list of books for further reading is provided. Working through the exercises provides a valuable source of extension and enrichment for all pupils and adults interested in mathematics.
