The labs are practical and easy to follow, with sample calculations, data tables, and worksheets to complete. Each includes suggested tasks/activities to apply the theory to real-world applications. Students will explore assessments of strength, aerobic capacity, power output, speed, change of direction, and muscular endurance, and gain understanding in the following areas: Definitions of commonly used terms within the area of exploration, as well as commonly misused terms; Assessing performance, i.e., power, strength, speed, etc.; Understanding laboratory and field-based techniques for specific athlete populations; Describing optimal methods for testing in all aspects of physical performance; Evaluation of test results based upon sport and/or athlete normative data.
