Machine Learning in Medicine Ton J. Cleophas,Aeilko H. Zwinderman,2013-05-30 Machine learning is concerned with the analysis of large data and multiple variables However it is also often more sensitive than traditional statistical methods to analyze small data The first volume reviewed subjects like optimal scaling neural networks factor analysis partial least squares discriminant analysis canonical analysis and fuzzy modeling This second volume includes various clustering models support vector machines Bayesian networks discrete wavelet analysis genetic programming association rule learning anomaly detection correspondence analysis and other subjects Both the theoretical bases and the step by step analyses are described for the benefit of non mathematical readers Each chapter can be studied without the need to consult other chapters Traditional statistical tests are sometimes priors to machine learning methods and they are also sometimes used as contrast tests To those wishing to obtain more knowledge of them we recommend to additionally study 1 Statistics Applied to Clinical Studies 5th Edition 2012 2 SPSS for Starters Part One and Two 2012 and 3 Statistical Analysis of Clinical Data on a Pocket Calculator Part One and Two 2012 written by the same authors and edited by Springer New York

Surgically Treated Intracerebral Haemorrhage Lovisa Tobieson,2019-04-17 Mortality and morbidity of intracerebral haemorrhage ICH is excessively high and the case fatality rate has not improved in the last decades Although surgery for ICH can be life saving no positive effect on functional outcome has been found in large cohorts of ICH patients Increased understanding of the pathophysiology of ICH is needed to develop improved treatment strategies In 17 ICH

patients paired cerebral microdialysis CMD catheters were inserted in the perihemorrhagic zone PHZ and in normal uninjured cortex at time of surgery Despite normalisation of cerebral blood flow a persistent metabolic crisis indicative of mitochondrial dysfunction was detected in the PHZ This metabolic pattern was not observed in the uninjured cortex CMD was also used to sample proteins for proteomic analysis A distinct proteome profile that changed over time was found in the PHZ when compared to the seemingly normal uninjured cortex However protein adsorption to CMD membranes which may interfere with concentration measurements was substantial Surgical treatment of 578 ICH patients was analysed in a nation wide retrospective multi centre study in Sweden over five years Patients selected for surgery had similar age pre operative level of consciousness and co morbidity profiles but ICH volume and the proportion of deep seated ICH differed among the six neurosurgical centres Furthermore there was variability in the post operative care including the use and duration of intracranial pressure monitoring cerebrospinal fluid drainage and mechanical ventilation In conclusion the results of this thesis show that i Despite surgical removal of an ICH a metabolic crisis caused by mitochondrial dysfunction a potential future therapeutic target persists in the perihemorrhagic zone ii iii CMD is a valuable tool in ICH research for sampling novel biomarkers using proteomics which may aid in the development of improved therapeutic interventions However caveats of the technique such as protein adsorption to the CMD membrane must be considered iv The nation wide study illustrates similar clinical features in patients selected for ICH surgery but substantial variability in ICH volume and location as well as neurocritical care strategies among Swedish neurosurgical centres Development of refined clinical guidelines may reduce such intercentre variability and lead to improved functional outcome for ICH patients

Numerical Methods in Software and Analysis John R. Rice, 2014-05-19 Numerical Methods Software and Analysis Second Edition introduces science and engineering students to the methods tools and ideas of numerical computation Introductory courses in numerical methods face a fundamental problem there is too little time to learn too much This text solves that problem by using high quality mathematical software In fact the objective of the text is to present scientific problem solving using standard mathematical software This book discusses numerous programs and software packages focusing on the IMSL library including the PROTRAN system and ACM Algorithms The book is organized into three parts Part I presents the background material Part II presents the principal methods and ideas of numerical computation Part III contains material about software engineering and performance evaluation A uniform approach is used in each area of numerical computation First an intuitive development is made of the problems and the basic methods for their solution Then relevant mathematical software is reviewed and its use outlined Many areas provide extensive examples and case studies Finally a deeper analysis of the methods is presented as in traditional numerical analysis texts Emphasizes the use of high quality mathematical software for numerical computation Extensive use of IMSL routines Features extensive examples and case studies
