

One of our core values is that "everyone owns quality." Everyone, ranging from production workers, to coordinators, to quality technicians, to our leadership team - are all responsible for calling out quality concerns and delivering a perfected service. The hierarchy below helps us show how that culture permeates through the organization and is the cornerstone to our Quality Management System.

Food quality management

Pieter Nel Luning, Willem Marcelis, 2025-07-21 Consumer understanding of food quality is crucial as their concerns for healthy safe and sustainable food production remain high. This forces actors and stakeholders in the agribusiness and food industry to use quality management as a strategic approach in production and innovation. This book describes Food Quality Management (FQM) in one integrated concept. Firstly, all relevant aspects of food quality management are combined into one FQM function model which shaped the structure of the book chapters. Secondly, the authors have embedded the techno managerial approach in the book. This approach starts with the notion that food quality is the outcome of the combined effect of food behaviour and human behaviour. The core principle of this approach is the concurrent use of technological and managerial theories and models to analyse food systems behaviour and people's quality behaviour and generate adequate improvements to the system. Topics covered in the book include food quality properties and concepts, essentials of quality management and food technology and details about food and human behaviour. Furthermore, this book describes in detail the technological and managerial principles and practices in the five FQM functions: quality design, quality control, quality improvement, quality assurance, and quality policy and strategy. Moreover, for each function a special topic relevant for the function is highlighted, namely consumer oriented design, product versus resource control, quality gurus and improvement, quality assurance standards and guidelines like GMP, HACCP, ISO 22000, IFS, and BRC, and Total Quality Management. This publication is a must have for students, researchers, and agribusiness and food industry professionals active in various areas of food production in the supply chain. The integrated approach with technological and managerial principles and concepts for analysing food quality management issues makes this a valuable reference book.

Total Quality Management and Operational

Excellence John S. Oakland, 2014-04-24 The notion of Quality in business performance has exploded since the publication of the first edition of this classic text in 1989. Today there is a plethora of performance improvement frameworks including Baldrige, EFQM, Lean Six Sigma, and ISO 9001, offering a potentially confusing variety of ways to achieve business excellence. Quality guru John Oakland's famous TQM model, in many ways a precursor to these frameworks, has evolved to become the ultimate holistic overview of performance improvement strategy. Incorporating the frameworks that succeeded it, the revised model redefines Quality by Accelerating change, Reducing cost, Protecting reputation. Oakland's popular practical jargon free style, along with ten case studies, eight of which are brand new, effortlessly ties the model to its real life applications, making it easy to understand how to apply what you've learned to your practices and achieve sustainable competitive advantage.

Total Quality Management and Operational Excellence Text with Cases Fourth Edition is supplemented for the first time with a suite of online teaching aids for busy tutors This exciting update of a classic text is perfect for all students studying for professional qualifications in the management of quality or those studying science engineering or business and management who need to understand the part TQM may play in their subjects **Food Safety Management Manual ,2009**

Private food law Bernd van der Meulen,2023-09-04 Since the turn of the Millennium world wide initiatives from the private sector

have turned the regulatory environment for food businesses upside down For the first time in legal literature this book analyses private law initiatives relating to the food chain often referred to as private voluntary standards or schemes Private standards are used to remedy flaws in legislation in order to reach higher levels of consumer protection than the ones chosen by the EU legislature and to manage risks and liability beyond the traditional limits of food businesses We see that litigation is no longer solely framed by legislative requirements but ever more by private standards such as GlobalGAP BRC IFS SQF and ISO These private standards incorporate public law requirements thus embedding them in contractual relations and exporting them beyond the jurisdiction of public legislators Other standards focus on corporate social responsibility or sustainability This book also addresses how private religious standards such as Kosher and Halal play a role in defining specific markets of growing importance It is noted that organic standards have found an interesting symbioses with public law Another development on this topic is that food businesses are inspected more often by private auditors than by public inspectors Effects in terms of receiving or being denied certification far outweigh public law sanctions In short private law has changed an entire legal infrastructure for the food sector It emerges as competing with the public law regulatory infrastructure This book is of interest to all who concern themselves with food law legislation and litigation and the evolving role of private standards on changing the landscape of food chains and innovation Food Safety Management Programs
