

ACTIVITY 25 Continued

14–18 Work Backward Reinforce the meaning of points on the graph of the hull speed function (length at waterline, hull speed). Students should locate the point where $x = 24$ on the graph to find the speed of a boat with a 24-foot length at the waterline. Students should locate the point where $y = 6$ on the graph to find the length at the waterline of a boat with a hull speed of 6 knots.

Check Your Understanding

Debrief students' answers to these items to ensure that they understand concepts related to interpreting the graph of a square root function.

Answers

19. The hull speed is about 4 knots.
20. The points on the graph are not $(1, 1)$, $(4, 2)$, $(9, 3)$, and so on. This is because the graph has been vertically stretched, which means the equation must include a transformation of some type.

ASSESS

Students' answers to Lesson Practice problems will provide you with a formative assessment of their understanding of the lesson concepts and their ability to apply their learning. See the Activity Practice for additional problems for this lesson. You may assign the problems here or use them as a culmination for the activity.

LESSON 25-1 PRACTICE

21.

ADAPT

Check students' answers to the Lesson Practice to ensure that they understand the graphs of square root functions and their transformations. Additionally, students should understand the connection between the domain and range of the parent function and the domain and range of the transformations of the parent function. As additional practice, provide students with the domain and range of a square root function and have students write a square root function that would match.

My Notes

Lesson 25-1 Square Root Functions

The graph of the hull speed of a boat H is shown below. You also sketched this graph in Item 1a.

19. Use the graph to estimate the hull speed of a boat that is 24 feet long at the waterline.
The hull speed is about 5.5 knots.
20. Use the graph to estimate the length at the waterline of a boat whose hull speed is 6 knots.
The boat would be about 36 feet long at the waterline.
21. Write an equation that could be solved to determine the length at the waterline of a boat with a hull speed of 6 knots.
 $1.34\sqrt{x} = 6$

Check Your Understanding

19. Use the graph at the top of the page to estimate the hull speed of a boat that is 9 feet long at the waterline.
20. Explain how you can tell from the graph above that the equation relating the hull speed and the length of the boat is not $H(x) = \sqrt{x}$.

LESSON 25-1 PRACTICE

21. Graph $f(x) = \sqrt{x}$ and $g(x) = \frac{1}{2}\sqrt{x}$ on the same axes.
22. Describe $g(x)$ as a transformation of $f(x)$. What are the domain and range of each function?
23. Graph $p(x) = \sqrt{x}$ and $q(x) = \sqrt{x+4} - 2$ on the same axes.
24. Describe $q(x)$ as a transformation of $p(x)$. What are the domain and range of each function?
25. Reason abstractly. Write a square root function that has a domain of $x \geq 7$ and a range of $y \geq 2$. Use a graphing calculator to confirm that your function meets the given requirements.
26. The graph of g is a vertical shrink of f by a factor of $\frac{1}{2}$. Both graphs contain the point $(9, 3)$. Domain of both functions: $x \geq 0$; $\{x \mid x \leq 9, x \geq 0\}$; $[0, \infty)$; range of both functions: $y \geq 0$; $\{y \mid y \leq 3, y \geq 0\}$; $[0, \infty)$; domain of g : $x \geq -4$; $\{x \mid x \leq 9, x \geq -4\}$; $[-4, \infty)$; range of g : $y \geq -2$; $\{y \mid y \leq 3, y \geq -2\}$; $[-2, \infty)$; domain and range of g : $x \geq -4$ and $y \geq -2$.
27. $f(x) = a\sqrt{x-7} + 2$ for $a > 0$. Answer is acceptable without the a .

Schliemann, David W. Carraher, Bárbara M. Brizuela, 2006-08-29 Bringing Out the Algebraic Character of Arithmetic contributes to a growing body of research relevant to efforts to make algebra an integral part of early mathematics instruction an area of studies that has come to be known as Early Algebra It provides both a rationale for promoting algebraic reasoning in the elementary school curriculum and empirical data to support it The authors regard Early Algebra not as accelerated instruction but as an approach to existing topics in the early mathematics curriculum that highlights their algebraic character Each chapter shows young learners engaged in mathematics tasks where there has been a shift away from computations on specific amounts toward thinking about relations and functional dependencies The authors show how young learners attempt to work with mathematical generalizations before they have learned formal algebraic notation The book suitable as a text in undergraduate or graduate mathematics education courses

includes downloadable resources with additional text and video footage on how students reason about addition and subtraction as functions on how students understand multiplication when it is presented as a function and on how children use notations in algebraic problems involving fractions These three videopapers written text with embedded video footage present relevant discussions that help identify students mathematical reasoning The printed text in the book includes transcriptions of the video episodes in the CD ROM Bringing Out the Algebraic Character of Arithmetic is aimed at researchers practitioners curriculum developers policy makers and graduate students across the mathematics education community who wish to understand how young learners deal with algebra before they have learned about algebraic notation
