Mia and her family spent their summer vacation traveling cross-country with his family. Their first stop was Yellowstone National Park in Wyoming and Montana. Yellowstone is famous for its geysers, especially one commonly referred to as Old Faithful. A geyser is a spring that erupts intermittently, forcing a fountain of water and steam from a hole in the ground. Old Faithful can have particularly long and fairly predictable eruptions. As a matter of fact, park rangers have observed the geyser over many years and have developed patterns they use to predict the timing of the next eruption.

Park rangers have recorded the information in the table below.

Length of Eruption (in minutes)	Approximate Time Until Next Eruption (in minutes)
1.5	75
2.0	90
2.5	105

Connect to History

Yellowstone National Park was the first National Park. The park was established by Congress in 1872.

broad topic with many possible meanings Expanded definitions of diversity that are relevant to the Visualization community and to computing at large are considered The broader conversation of inclusion and diversity is framed within the broader sociological context in which it must be considered Solutions to recruit and retain a diverse research community and strategies for supporting inclusion efforts are presented Additionally community members present short stories detailing their non inclusive experiences in an effort to facilitate a community wide conversation surrounding very difficult situations It is important to note that this is by no means intended to be a comprehensive authoritative statement on the topic Rather this book is intended to open the conversation and begin to build a framework for diversity and inclusion in this specific research community While intended for the Visualization community ideally this book will provide guidance for any computing community struggling with similar issues and looking for solutions

Current Approaches to Tells in the Prehistoric Old World Antonio Blanco-González,Tobias L. Kienlin,2020-11-30 Deeply stratified settlements are a distinctive site type featuring prominently in diverse later prehistoric landscapes of the Old World Their massive materiality has attracted the curiosity of lay people and archaeologists alike Nowadays a wide variety of archaeological projects are tracking the lifestyles and social practices that led to the building up of such superimposed artificial hills However prehistoric tell dwelling communities are too often approached from narrow local perspectives or discussed within strict time and culture specific debates There is a great potential to learn from such ubiquitous archaeological manifestations as the physical outcome of cross cutting dynamics and comparable underlying forces irrespective of time and space This volume tackles tells and tell like sites as a transversal phenomenon whose commonalities and divergences are poorly understood yet may benefit from cross cultural comparison Thus the book intends to assemble a representative range of ongoing theory and science based fieldwork projects targeting this kind of sites With the aim of encompassing a variety of social and material dynamics the volume s scope is diachronic from the Earliest Neolithic up to the Iron Age and covers a very large region from Iberia in Western Europe to Syria in the Middle East The core of the volume comprises a selection of the most remarkable contributions to the session with a similar title celebrated in the European Association of Archaeologists Annual Meeting held at Barcelona in 2018 In addition the book includes invited chapters to round out underrepresented areas and periods in the EAA session with relevant research programmes in the Old World To accomplish such a cross cultural course the book takes a case based approach with contributions disparate both in their theoretical foundations from household archaeology social agency and formation theory and their research strategies including geophysical survey microarchaeology and high resolution excavation and dating
