Modeling Life Alan Garfinkel,Jane Shevtsov,Yina Guo,2017-09-06 This book develops the mathematical tools essential for students in the life sciences to describe interacting systems and predict their behavior From predator prey populations in an ecosystem to hormone regulation within the body the natural world abounds in dynamical systems that affect us profoundly Complex feedback relations and counter intuitive responses are common in nature this book develops the quantitative skills needed to explore these interactions Differential equations are the natural mathematical tool for quantifying change and are the driving force throughout this book The use of Euler s method makes nonlinear examples tractable and accessible to a broad spectrum of early stage undergraduates thus providing a practical alternative to the procedural approach of a traditional Calculus curriculum Tools are developed within numerous relevant examples with an emphasis on the construction evaluation and interpretation of mathematical models throughout Encountering these concepts in context students learn not only quantitative techniques but how to bridge between biological and mathematical ways of thinking Examples range broadly exploring the dynamics of neurons and the immune system through to population dynamics and the Google PageRank algorithm Each scenario relies only on an interest in the natural world no biological expertise is assumed of student or instructor Building on a single prerequisite of Precalculus the book suits a two quarter sequence for first or second year undergraduates and meets the mathematical requirements of medical school entry The later material provides opportunities for more advanced students in both mathematics and life sciences to revisit theoretical knowledge in a rich real world framework In all cases the focus is clear how does the math help us understand the science *Mathematical Methods for Geophysics and Space Physics* William I. Newman,2016-05-03 Graduate students in the natural sciences including not only geophysics and space physics but also atmospheric and planetary physics ocean sciences and astronomy need a broad based mathematical toolbox to facilitate their research In addition they need to survey a wider array of mathematical methods that while outside their particular areas of expertise are important in related ones While it is unrealistic to expect them to develop an encyclopedic knowledge of all the methods that are out there they need to know how and where to obtain reliable and effective insights into these broader areas Here at last is a graduate textbook that provides these students with the mathematical skills they need to succeed in today s highly interdisciplinary research environment This authoritative and accessible book covers everything from the elements of vector and tensor analysis to ordinary differential equations special functions and chaos and fractals Other topics include integral transforms complex analysis and inverse theory partial differential equations of mathematical geophysics probability statistics and computational methods and much more Proven in the classroom *Mathematical Methods for Geophysics and Space Physics* features numerous exercises throughout as well as suggestions for further reading Provides an authoritative and accessible introduction to the subject

Covers vector and tensor analysis ordinary differential equations integrals and approximations Fourier transforms diffusion and dispersion sound waves and perturbation theory randomness in data and a host of other topics Features numerous exercises throughout Ideal for students and researchers alike An online illustration package is available to professors The Legitimacy of Poetic Reason O. Bradley Bassler, 2022-09-26 Many philosophical accounts of reason are geared toward providing rational justifications ex post facto rather than accounting for the role reason plays in actu in the process of creative work Moreover when in actu accounts of reason are given they are usually too narrow to describe the sort of high level creative work that is involved in the composition of poetry or the creation of a scientific theory This book suggests that the rudiments of a broader account are found in various German Idealist figures most notably the philosopher novelist critic Friedrich Schlegel and the philosophical poet and novelist Friedrich Hlderlin However German Idealism generally is subject to Hans Blumenberg s secularization critique which provides a strong prima facie argument that the accounts of poetic reason suggested by Schlegel and Hlderlin are indefensible This book argues that confronting Blumenberg s secularization critique and his associated legitimation of modernity with a romantic conception of poetic reason requires revisions on both sides and that the work of Lacan is especially well suited to provide the conditions upon which a legitimation of poetic reason can be provided *A Mathematics Sampler* William P. Berlinghoff, Kerry E. Grant, Dale Skrien, 2001-01-10 Now in its fifth edition *A Mathematics Sampler* presents mathematics as both science and art focusing on the historical role of mathematics in our culture It uses selected topics from modern mathematics including computers perfect numbers and four dimensional geometry to exemplify the distinctive features of mathematics as an intellectual endeavor a problem solving tool and a way of thinking about the rapidly changing world in which we live *A Mathematics Sampler* also includes unique LINK sections throughout the book each of which connects mathematical concepts with areas of interest throughout the humanities The original course on which this text is based was cited as an innovative approach to liberal arts mathematics in Lynne Cheney s report 50 HOURS A Core Curriculum for College Students published by the National Endowment for the Humanities

Heinrich Von Kleist and Modernity (Studies in German Literature, Linguistics, and Culture) Bernd Fischer, Timothy J. Mehigan, 2011 New essays employing a multitude of approaches to the works of Kleist in the process shedding light on our present modernity Modernity according to some views poses the problem of homo politicus the problem of how to act in a moral universe without a master narrative without a final foundation From this angle the oeuvre of Heinrich von Kleist novellas dramas and essays addresses problems emerging from a new universe of Kantian provenance in many ways the same universe we inhabit today This volume of new essays investigates Kleist s position in our ever changing conception of modernity employing aesthetic narrative philosophical biographical political economic anthropological psychological and cultural approaches and wrestling with the difficulties of historicizing Kleist s life and work Central questions are To what extent can the multitude of breaking points and turning points endgames and pre games ruptures and departures that

permeate Kleist's work and biography be conceptually bundled together and linked to the emerging paradigm of modernity And to what extent does such an approach to Kleist not only advance understanding of this major German writer and his work but also shed light on the nature of our present modernity Contributors Sen Allan Peter Barton Hilda Meldrum Brown David Chisholm Andreas Gailus Bernhard Greiner Jeffrey L High Anette Horn Peter Horn Wolf Kittler Jonathan W Marshall Christian Moser Dorothea von Mücke Nancy Nobile David Pan Ricarda Schmidt Helmut J Schneider Bernd Fischer is Professor of German at the Ohio State University Tim Mehigan is Professor of German in the Department of Languages and Cultures at the University of Otago New Zealand

The Idealist Illusion and Other Essays Maurice Blondel, 2013-03-09 I was very happy when in 1997 Fiachra Long came to spend part of his sabbatical leave at the Archives Maurice Blondel at Louvain-la-Neuve This allowed him to bring together and complete his translation of three important articles from Maurice Blondel known as the philosopher of Aix-en-Provence These three articles form a unity they make explicit certain aspects of the method used in the great thesis of 1893 *Action* This thesis it is well known aroused many polemic debates after its appearance Thomist theologians accused Blondel of turning back towards Kantian idealism whereas the philosophers of the *Revue de métaphysique et de morale* accused him on the contrary of falling back on a pre-critical realism The three articles translated here each in its own way attempt to pass beyond these two opposite charges The *Idealist Illusion* 1898 underlines the fact that the content of consciousness should be unfurled as it appears by withdrawing from any idealist or realist prejudice before judging the consistency of its content as a whole In this way Blondel supports the phenomenological method used in his thesis *The Elementary Principle of a Logic of the Moral Life* 1903 is a very well worked text which shows that the logic of possession and privation is broader than the logic of affirmation and negation Using these words Blondel develops certain striking laws of action such as that of the parallelogram of contrary forces
