Optoelectronic Properties of Graphene-Based van der Waals Hybrids Kallol Roy, 2020-10-21 This thesis deals with the development and in depth study of a new class of optoelectronic material platform comprising graphene and MoS₂ in which MoS₂ is used essentially to sensitize graphene and lead to unprecedentedly high gain and novel optoelectronic memory effects The results presented here open up the possibility of designing a new class of photosensitive devices which can be utilized in various optoelectronic applications including biomedical sensing astronomical sensing optical communications optical quantum information processing and in applications requiring low intensity photodetection and number resolved single photon detection **Military Publications** United States. Barbaree, 2013-11-21 A useful tool for practitioners researchers theorists and advanced students Handbook of Sexual Assault analyzes the nature and extent of the problem of sexual offending and classifies the types of offenders according to an empirically developed system In addition contributors present the theories of the etiology and maintenance of sexual offending offer various perspectives and factors relevant to accurate assessment and detail contemporary treatment procedures *Electric Railway Directory and Buyers' Manual*, 1908 **Ground States of the Two-Dimensional Electron System at Half-Filling under Hydrostatic Pressure** Katherine A. Schreiber, 2019-09-04 This thesis presents the discovery of a surprising phase transition between a topological and a broken symmetry phase Phase transitions between broken symmetry phases involve a change in symmetry and those between topological phases require a change in topological order in rare cases however transitions may occur between these two broad classes of phases in which the vanishing of the topological order is accompanied by the emergence of a broken symmetry This thesis describes observations of such a special phase transition in the two dimensional electron gas confined in the GaAs AlGaAs structures When tuned by hydrostatic pressure the $\nu = 5/2$ and $\nu = 7/2$ fractional quantum Hall states believed to be prototypical non Abelian topological phases of the Pfaffian universality class give way to an electronic nematic phase Remarkably the fractional quantum Hall states involved are due to pairing of emergent particles called composite fermions The findings reported here therefore provide an interesting example of competition of pairing and nematicity This thesis provides an introduction to quantum Hall physics of the two dimensional electron gas contains details of the high pressure experiments and offers a discussion of the ramifications and of the origins of the newly reported phase transition *Handbook for Conducting Research on Human Sexuality* Michael W. Wiederman, Bernard E.
