

Trucolor®

Al-Zn COATING TECHNOLOGY

TRUCOLOR® is the most preferred pre-painted steel in the market today because it has the ability to endure the extreme weather conditions of our country. TRUCOLOR®'s unmatched strength is because it uses Superlume steel as its substrate and by doing this, it has taken advantage of the combined Al-Zn coating protection that is inherent in Superlume.

Our product innovation does not only stop there. We coat several layers of paint on the surface and it does not only enhance TRUCOLOR®'s corrosion resistance, but also leave a colorful consistent finish. This unique combination results in a product that perfectly combines strength and beauty in one complete package.

It is no wonder why TRUCOLOR® steel is the material of choice by both local and international roll formers in producing different roofing, sidings and ceiling designs. TRUCOLOR® is any engineer and architect's ideal building material that will help them realize their dreams, and give them the freedom to rethink and reinvent conventional designs.

Quality Performance Tests

Sonic Steel follows stringent testing methods to ensure a consistent quality level for all TRUCOLOR® Steel products. We subject all products under several tests like T-Bend, MEK Rub test and Salt Spray test because we want to ensure that all Trucolor steel sold in the market has passed both the International and Local standards for pre-painted galvanized steel.

WHAT IS PAINT WEATHERING (colour fading and delamination)?

Colour fading is caused by the degradation of the key ingredients in the paint system, e.g. pigments and resins; due to the prolonged weathering and poor formulation.

Delamination is the separation of the top coat from the primer and can be caused by UV effects, poor surface preparation, poor paint formulation, or poor paint/primer specification.

Colour fading & Delamination

EXCELLENT PAINT SYSTEM

Sonic Steel utilises optimum paint formulation and pigment blends to provide excellent long term color stability for all TRUCOLOR® steel products.

Trucolor® Steel

Conventional pre-painted steel

The samples pictured were exposed under the same environment conditions for the same period of time. The conventional pre-painted steel shows significant color fading, while TRUCOLOR® steel shows very little color change, thus providing long lasting beauty.

The paint system used in the manufacturing of TRUCOLOR® steel has a high degree of resin stability, color stability and UV resistance. These layers of coating technology creates an overall coating that gives TRUCOLOR® steel superior durability against weathering and UV Penetration, when compared with other pre-painted steel.
