

Model 2 – Random Sampling Method

- a. According to Model 2, what is the probability of selecting a red die in a random draw out of the bag?

The probability of selecting a red die in a random draw out of the bag is 50% (0.5).

- b. Suppose you draw a die from the bag and find it is red. How does this information in a single case impact on the probability of selecting a red die in subsequent draws (single or multiple)?

The probability of selecting a red die is determined by using replacement, not by adding one more red die to the bag. If you draw a red die, you should be sure to replace it. If the probability of getting a red die was 0.5, then drawing a red die would not affect the probability of getting a red die.
