Nature-First Cities Cam Brewer, Herb Hammond, Sean Markey, 2024-09-03 Nature belongs in cities but how do we put nature first without pushing people aside Nature First Cities reveals the false dichotomy of that question by recognizing that people and nature are indivisible Western urbanization has meant the ongoing expulsion of nature which is engendering biodiversity loss and inequality thwarting economic potential and affecting health This volume instead applies the science and practice of nature directed stewardship to cities Tested through case studies this methodology for urban ecosystem restoration is uniquely effective at revitalizing our strained cities Nature is woven into networks distributed equitably across neighbourhoods and

partnered with the urban density that is essential for addressing the climate crisis Nature First Cities offers a practical framework for urban planning that reinforces our place in nature both physically by ensuring that cities are replete with biodiversity and intact ecosystems and conceptually by rebalancing our relationships with the planet and with one another

Reimagining Sustainable Cities Stephen M. Wheeler, 2021-12-07 A cutting edge solutions oriented analysis of how we can reimagine cities around the world to build sustainable futures What would it take to make urban places greener more affordable more equitable and healthier for everyone In recent years cities have stepped up efforts to address climate and sustainability crises But progress has not been fast enough or gone deep enough If communities are to thrive in the future we need to quickly imagine and implement an entirely new approach to urban development one that is centered on equity and rethinks social political and economic systems as well as urban designs With attention to this need for structural change *Reimagining Sustainable Cities* advocates for a community informed model of racially economically and socially just cities and regions The book aims to rethink urban sustainability for a new era In *Reimagining Sustainable Cities* Stephen M Wheeler and Christina D Rosan ask big picture questions of interest to readers worldwide How do we get to carbon neutrality How do we adapt to a climate changed world How can we create affordable inclusive and equitable cities While many books dwell on the analysis of problems *Reimagining Sustainable Cities* prioritizes solutions oriented thinking surveying historical trends providing examples of constructive action worldwide and outlining alternative problem solving strategies Wheeler and Rosan use a social ecology lens and draw perspectives from multiple disciplines Positive readable and constructive in tone *Reimagining Sustainable Cities* identifies actions ranging from urban design to institutional restructuring that can bring about fundamental change and prepare us for the challenges ahead

Bird versus Bulldozer Audrey Mayer, 2021-03-09 An examination of the struggle to conserve biodiversity in urban regions told through the story of the threatened coastal California gnatcatcher The story of the rare coastal California gnatcatcher is a parable for understanding the larger ongoing struggle to conserve biodiversity in regions confronted with intensifying urban development Because this gnatcatcher depends on vanishing coastal sage scrub in Southern California it has been regarded as a flagship species for biodiversity protection since the early 1990s But the uncertainty of the gnatcatcher s taxonomic classification and whether it can be counted as a listable unit under the Endangered Species Act has provoked contentious debate among activists scientists urban developers and policy makers Synthesizing insights from ecology environmental history public policy analysis and urban planning as she tracks these debates over the course of the past twenty five years Audrey L Mayer presents an ultimately optimistic take on the importance of much neglected regional conservation planning strategies to create sustainable urban landscapes that benefit

humans and wildlife alike Resilience in Ecology and Urban Design S.T.A. Pickett, M.L. Cadenasso, Brian McGrath, 2013-01-13 The contributors to this volume propose strategies of urgent and vital importance that aim to make today's urban environments more resilient Resilience the ability of complex systems to adapt to changing conditions is a key frontier in ecological research and is especially relevant in creative urban design as urban areas exemplify complex systems With something approaching half of the world's population now residing in coastal urban zones many of which are vulnerable both to floods originating inland and rising sea levels making urban areas more robust in the face of environmental threats must be a policy ambition of the highest priority The complexity of urban areas results from their spatial heterogeneity their intertwined material and energy fluxes and the integration of social and natural processes All of these features can be altered by intentional planning and design The complex integrated suite of urban structures and processes together affect the adaptive resilience of urban systems but also presupposes that planners can intervene in positive ways As examples accumulate of linkage between sustainability and building landscape design such as the Shanghai Chemical Industrial Park and Toronto's Lower Don River area this book unites the ideas data and insights of ecologists and related scientists with those of urban designers It aims to integrate a formerly atomized dialog to help both disciplines promote urban resilience

New Urban Metabolism Josep Antoni Acebillo, 2012 The iCUP Institute for Contemporary Urban Project is the institute directed by Acebillo and coordinated by Enrico Sassi within which this book has been produced and it is part of the Accademia di architettura USI Università della Svizzera Italiana Mendrisio Page 6 **Routledge Handbook of Forest Ecology** Kelvin S.-H. Peh, Richard T. Corlett, Yves Bergeron, 2015-10-16 This comprehensive handbook provides a unique resource covering all aspects of forest ecology from a global perspective It covers both natural and managed forests from boreal temperate sub tropical and tropical regions of the world The book is divided into seven parts addressing the following themes forest types forest dynamics forest flora and fauna energy and nutrients forest conservation and management forests and climate change human impacts on forest ecology While each chapter can stand alone as a suitable resource for a lecture or seminar the complete book provides an essential reference text for a wide range of students of ecology environmental science forestry geography and natural resource management Contributors include leading authorities from all parts of the world Complexity Economics Koenraad Verboven, 2020-11-25 Economic archaeology and ancient economic history have boomed the past decades The former thanks to greatly enhanced techniques to identify collect and interpret material remains as proxies for economic interactions and performance the latter by embracing the frameworks of new institutional economics Both disciplines however still have great difficulty talking with each other There is no reliable method to convert ancient proxy data into the economic indicators used in economic history In turn the shared cultural belief systems underlying institutions and the symbolic ways in which these are reproduced remain invisible in the material record This book explores ways to bring both disciplines closer together by building a theoretical and methodological framework to

evaluate and integrate archaeological proxy data in economic history research Rather than the linear interpretations offered by neoclassical or neomalthusian models we argue that complexity economics based on system theory offers a promising way forward
