Review of the Army's Technical Guides on Assessing and Managing Chemical Hazards to Deployed Personnel

National Research Council, Division on Earth and Life Studies, Board on Environmental Studies and Toxicology, Committee on Toxicology, Subcommittee on the Toxicological Risks to Deployed Military Personnel, 2004-09-03 To guide mission planning military decision makers need information on the health risks of potential exposures to individual soldiers and their potential impact on mission operations To help with the assessment of chemical hazards the U S Army Center for Health Promotion and Preventive Medicine developed three technical guides for characterizing chemicals in terms of their risks to the mission and to the health of the force The report reviews these guides for their scientific validity and conformance with current risk assessment practices The report finds that the military exposure guidelines are appropriate with some modification for providing force health protection but that for assessing mission risk a new set of exposure guidelines is needed that predict concentrations at which health effects would degrade the performance of enough soldiers to hinder mission accomplishment
