Wide Band Gap Semiconductor Nanowires For Optical Devices:

Wide Band Gap Semiconductor Nanowires 2 Vincent Consonni,Guy Feuillet,2014-09-15 This book the second of two volumes describes heterostructures and optoelectronic devices made from GaN and ZnO nanowires Over the last decade the number of publications on GaN and ZnO nanowires has grown exponentially in particular for their potential optical applications in LEDs lasers UV detectors or solar cells So far such applications are still in their infancy which we analyze as being mostly due to a lack of understanding and control of the growth of nanowires and related heterostructures

Furthermore dealing with two different but related semiconductors such as ZnO and GaN but also with different chemical and physical synthesis methods will bring valuable comparisons in order to gain a general approach for the growth of wide band gap nanowires applied to optical devices *Wide Band Gap Semiconductor Nanowires 2* Vincent Consonni,Guy

Renewable Energies for Central Asia Countries: Economic, Environmental and Social Impacts Aldo Iacomelli,2006-07-02 In the last few years awareness and worries about the exhaustion of natural resources are increasing but this fact is still very much discussed about its analytical measurement and therefore not yet demonstrated However what has been demonstrated is that the 6 billion inhabitants of the Earth move every kind of goods and wares around the world at about 8 tons per capita which means about 50 billion tons per year This is the same amount as is moved yearly by natural forces such as winds eruptions earthquakes rain Since the Kyoto Protocol entered into force on 16 February 2005 an investment on rational use of energy savings and efficiency is the main premise supporting the development of new energy sources needed to meet the target of the KP and UNFCCC If energy consumption decreases renewable sources could cover a significant part of the demand of energy in particular electricity if consumption remains uselessly high because inefficient and less energy consuming acting also on final uses renewable energy would become a reality a feasible method even in these sectors With investments being equal today all in the sector of generation from fossil sources if there were parallel researches on how to reduce consumption and wastes considerably at least 35% and on power plants from renewable sources there would be also a reduction of gas emissions without any negative influence on development New technologies and new energy products will play a crucial role in the development of a market of sustainable energy products that should grow in a competitive way cost effective to stand against the challenge of change
