received a grant from the Veterans Health Administration Office of Specialty Care entitled Patient Centered Model for the
Management of Chronic Obstructive Pulmonary Disease The grant s goals were to enhance the recognition and diagnosis of
COPD and implement a Patient Centered Model for the Management of COPD As the work on that proposal progressed we
realized that providers did not have an up to date comprehensive easily read how to manual for the management of COPD
despite all the advances in COPD care that have occurred over the past 5 years Consensus documents such as the VA DOD
Guidelines were abbreviated summaries that were rarely used From those discussions the concept for this volume a COPD
Primer developed The goal was to develop a practical book that concisely presented COPD to providers with sufficient
background and explanation of the physiologic and scientific rationale for various management strategies without becoming

an esoteric academic work We hope that this COPD Primer has achieved that goal and will be a useful practical text for practitioners and medical trainees alike The COPD Primer begins with an examination of what COPD is it is really a syndrome a constellation of historical features and clinical physiologic and radiographic findings However those elements come together in many different ways to create multiple different COPD phenotypes that are only now being recognized and used to define specific management strategies COPD research has progressed beyond the simple classification of blue bloaters and pink puffers Next the epidemiology and economic consequences of COPD are reviewed Bill Eschenbacher presents an approach to the patient with respiratory symptoms with detailed discussions of pulmonary function testing and how airflow limitation obstruction is identified by spirometry and the use of lung imaging to identify individuals with COPD Michael Borchers and Gregory Motz summarize current evidence implicating genetics proteolytic imbalance oxidative stress inflammation occupational and environmental exposures and innate and adaptive immune function in the pathogenesis of COPD and the implication of these findings to future treatments The single most important intervention in the prevention and treatment of COPD is smoking cessation Shari Altum Katherine Butler and Rachel Juran present a practical approach to smoking cessation utilizing motivational interviewing in combination with pharmacologic interventions Then they expand upon these concepts to provide practitioners with convenient realistic suggestions to encourage patient self management in all aspects of COPD care and overall health Ahsan Zafar reviews the natural history recently described COPD phenotypes and gender differences that clearly illustrate the broad spectrum of disease that comprises the term COPD The cover illustration highlights Dr Zafar s creative and artistic talents The extensive nonpulmonary aspects of COPD are reviewed by Ralph Panos in an examination of COPD s multi organ manifestations Next the effect of COPD on sleep and the overlap syndrome the concurrence of COPD and obstructive sleep apnea and its consequences are presented Jean Elwing examines the effect of COPD on the pulmonary vasculature with a detailed discussion of the evaluation and management of pulmonary hypertension associated with COPD COPD s effects on psychosocial functioning and familial interactions are presented by Mary Panos and Ralph Panos The focus of the Primer then shifts from manifestations to treatment with a discussion of stable COPD management With the current plethora of devices for delivering respiratory medications it is difficult for both patients and providers to sustain knowledge of their proper use Aaron Mulhall presents a practical guide to correct inhaler use that reviews all the current devices Folarin Sogbetun then reviews the management of outpatient COPD exacerbations and Nishant Gupta discusses the approach to the patient hospitalized with COPD Because patients with COPD often see multiple subspecialty physicians in addition to their primary care providers interdisciplinary communication and coordination of care is essential for their management Sara Krzywkowski Mohn reviews the interactions between primary and specialty care for the patient with COPD with suggestions for improved communication and care coordination Finally advance care planning including palliative care and hospice is reviewed with a discussion of how end stage COPD affects not only the patient but

also their family and social network This COPD Primer incorporates the knowledge that we have learned over the past several years during the development and implementation of a patient centered model for the management of COPD It was written with the explicit goal of assisting both the practicing provider and medical trainee in the care of patients with COPD
